Subject Index

Adaptive estimation in time series regression models. Douglas G. Steigerwald. **54** (1992) 251–1275

Adaptive estimators • On the finite sample behavior of ——. Douglas G. Steigerwald. **54** (1992) 371–400

Additive heteroscedasticity • Seemingly unrelated regressions under ——: Theory and share equation applications. David M. Mandy and Carlos Martins-Filho. **58** (1993) 315–346

Adjustment filters

The effect of seasonal —— on tests for a unit root. Eric Ghysels and Pierre Perron. **55** (1993) 57–98

Discussion: The effect of seasonal —— on tests for a unit root. Francis X. Diebold. **55** (1993) 99–103

Aggregate employment time series • Nonparametric evidence on asymmetry in business cycles using ——. Robert Hussey. **51** (1992) 217–231

Aggregation • Persistence, cointegration, and ——: A disaggregated analysis of output fluctuations in the U.S. economy. M.H. Pesaran, R.G. Pierse and K.C. Lee. . . . . **56** (1993) 57–88.

Aitken estimation • Quasi-—— for heteroskedasticity of unknown form. John G. Cragg. **54** (1992) 179–201

Allocative efficiency • A simplification of the Kopp-Diewert method of decomposing cost efficiency and some implications. Yaw M. Mensah. **60** (1994) 133–144

ANOVA F tests • Monte Carlo results on several new and existing tests for the error component models. Badi H. Baltagi, Young-Jae Chang, and Qi Li. **54** (1992) 95–120

Approximate slopes • A comparison of nonnested tests for misspecified models using the method of ——. Jeffrey E. Zabel. **57** (1993) 205–232

Approximate tests • A comparison of several exact and —— for structural shift under heteroscedasticity. Jerry G. Thursby. **53** (1992) 363–386

Approximation errors • Seasonality and —— in rational expectations models. Lars Peter Hansen and Thomas J. Sargent. **55** (1993) 21–55

AR(1) *disturbances* • Monte Carlo evidence on panel data regressions with —— and an arbitrary variance on the initial observations. Badi H. Baltagi, Young-Jae Chang, and Qi Li. **52** (1992) 371–380

AR(4) *process* • Bayes regression with autoregressive errors: A Gibbs sampling approach. Siddhartha Chib. **58** (1993) 275–294

Arbitrage pricing theory • A multi-dynamic-factor model for stock returns. Victor Ng, Robert F. Engle, and Michael Rothschild. **52** (1992) 245–266

Arbitrary variance • Monte Carlo evidence on panel data regressions with AR(1) disturbances and an —— on the initial observations. Badi H. Baltagi, Young-Jae Chang, and Qi Li. **52** (1992) 371–380

ARCH • Local scale models: State space alternative to integrated GARCH processes. Neil Shephard. **60** (1994) 181–202

ARCH disturbances • Unobserved component time series models with ——. Andrew Harvey, Esther Ruiz, and Enrique Sentana. **52** (1992) 129–157

ARCH effects • Testing for neglected nonlinearity in time series models: A comparison of neural network methods and alternative tests. Tae-Hwy Lee, Halbert White, and Clive W.J. Granger. **56** (1993) 269–290

ARCH modeling in finance: A review of the theory and empirical evidence. Tim Bollerslev, Ray Y. Chou, and Kenneth F. Kroner. **52** (1992) 5–59

ARCH models
A comparison of risk-premium forecasts implied by parametric versus nonparametric conditional mean estimators. Thomas H. McCurdy and Thanasis Stengos. **52** (1992) 225–244
A multi-dynamic-factor model for stock returns. Victor Ng, Robert F. Engle, and Michael Rothschild. **52** (1992) 245–266
Aggregate output fluctuations • Time series properties of——. Steven N. Durlauf. **56** (1993) 39–56
Filtering and forecasting with misspecified —— I: Getting the right variance with the wrong model. Daniel B. Nelson. **52** (1992) 61–90
Implied——from options prices. Robert F. Engle and Chowdhury Mustafa. **52** (1992) 289–311
Measuring risk aversion from excess returns on a stock index. Ray Chou, Robert F. Engle, and Alex Kane. **52** (1992) 201–224
Prediction in dynamic models with time-dependent conditional variances. Richard T. Baillie and Tim Bollerslev. **52** (1992) 91–113
Qualitative threshold ——. Christian Gourieroux and Alain Monfort. **52** (1992) 159–199
Stationarity of GARCH processes and of some nonnegative time series. Philippe Bougerol and Nico Picard. **52** (1992) 115–127
Stock market volatility and the information content of stock index options. Theodore E. Day and Craig M. Lewis. **52** (1992) 267–287
ARCH models in finance. Edited by Robert F. Engle and Michael Rothschild. **52** (1992) 1–311
ARCH structure • Identification and estimation of noninvertible non-Gaussian MA(q) processes. James B. Ramsey and Alvaro Montenegro. **54** (1992) 301–320
ARMA process • Prediction in dynamic models with time-dependent conditional variances. Richard T. Baillie and Tim Bollerslev. . . . **52** (1992) 91–113
Asset pricing
A comparison of risk-premium forecasts implied by parametric versus nonparametric conditional mean estimators. Thomas H. McCurdy and Thanasis Stengos. **52** (1992) 225–244
A multi-dynamic-factor model for stock returns. Victor Ng, Robert F. Engle, and Michael Rothschild. **52** (1992) 245–266
Asymmetry • Nonparametric evidence on —— in business cycles using aggregate employment time series. Robert Hussey. **51** (1992) 217–231
Asymptotic and finite sample distribution theory for IV estimators and tests in partially identified structural equations. In Choi and Peter C.B. Phillips. **51** (1992) 113–150
Asymptotic bias
Discussion: The effect of seasonal adjustment filters on tests for a unit root. Francis X. Diebold. **55** (1993) 99–103
The effect of seasonal adjustment filters on tests for a unit root. Eric Ghysels and Pierre Perron. **55** (1993) 57–98
Asymptotic distribution(s)
Cointegration in partial systems and the efficiency of single-equation analysis. Soren Johansen. **52** (1992) 389–402
Discussion: Seasonal cointegration. Denise R. Osborn. **55** (1993) 299–303
Efficient estimation and testing of cointegrating vectors in the presence of deterministic trends. Bruce E. Hansen. **53** (1992) 87–121
Finite-sample properties of single-equation estimators under structural change. Jiro Hodoshima. **53** (1992) 189–209
Seasonal cointegration: The Japanese consumption function. R.F. Engle, C.W.J. Granger, S. Hylleberg, and H.S. Lee. **55** (1993) 275–298
Specification tests for binary choice models based on index quantiles. Roger W. Klein. **59** (1993) 343–375
The spurious effect of unit roots on vector autoregressions: An analytical study. Hiro Y. Toda and Peter C.B. Phillips. **59** (1993) 229–255

Asymptotic expansions • Overdispersion tests for truncated Poisson regression models. Shiferaw Gurmu and Pravin K. Trivedi. **54** (1992) 347–370
Asymptotic MSE criterion • Minimum MSE estimation of a regression model with fixed effects from a series of cross-sections. Marno Verbeek and Theo Nijman. **59** (1993) 125–136
Asymptotic normality • Quadratic mode regression. Myoung-jae Lee. . . **57** (1993) 1–19
Asymptotic properties
Semiparametric least squares (SLS) and weighted SLS estimation of single-index models. Hidehiko Ichimura. **58** (1993) 71–120
The potential for efficiency gains in estimation from the use of additional moment restrictions. Gordon C.R. Kemp. **53** (1992) 387–399
Asymptotic sampling behavior • Distribution theory for the analysis of binary choice under uncertainty with nonparametric estimation of expectations. Hyungtaik Ahn and Charles F. Manski. **56** (1993) 291–321
Asymptotic tests • Nonnested testing for autocorrelation in the linear regression model. Paramsothy Silvapulle and Maxwell L. King. . **58** (1993) 295–314
Asymptotic theory
Fellow's opinion: Rules of thumb and pseudo-science. Esfandiar Maasoumi. **53** (1992) 1–4
Testing the null hypothesis of stationarity against the alternative of a unit root: How sure are we that economic time series have a unit root? Denis Kwiatkowski, Peter C.B. Phillips, Peter Schmidt, and Yongcheol Shin. **54** (1992) 159–178
Asymptotic variance • Some efficiency bounds for semiparametric discrete choice models. T. Scott Thompson. **58** (1993) 257–274
Auction theory • Deciding between the common and private value paradigms in empirical models of auctions. Harry J. Paarsch. **51** (1992) 191–215
Autocorrelation(s)
Higher-order sample —— and the unit root hypothesis. Herman J. Bierens. **57** (1993) 137–160
Nonnested testing for —— in the linear regression model. Paramsothy Silvapulle and Maxwell L. King. **58** (1993) 295–314
Robustness of size of tests of —— and heteroscedasticity to nonnormality. Merran Evans. **51** (1992) 7–24
Robustness to nonnormality of the Durbin-Watson test for ——. Mukhtar M. Ali and Subhash C. Sharma. **57** (1993) 117–136
Testing for —— in the presence of lagged dependent variables: A specification error approach. Hashem Dezhbakhsh and Jerry G. Thursby. **60** (1994) 251–272
Testing the null hypothesis of stationarity against the alternative of a unit root: How sure are we that economic time series have a unit root? Denis Kwiatkowski, Peter C.B. Phillips, Peter Schmidt, and Yongcheol Shin. **54** (1992) 159–178
Autocorrelation properties
Discussion: The effect of sampling error on the time series behavior of consumption data. Allan W. Gregory and Tony Wirjanto. **55** (1993) 267–273
The effect of sampling error on the time series behavior of consumption data. William R. Bell and David W. Wilcox. **55** (1993) 235–265
Autoregressive disturbances • Testing for —— in a time series regression with missing observations. Thomas S. Shively. **57** (1993) 233–255
Autoregressive errors
Bayes regression with ——: A Gibbs sampling approach. Siddhartha Chib. **58** (1993) 275–294
The power problems of unit root tests in time series with ——. David N. Dejong, John C. Nankervis, N.E. Savin, and Charles H. Whiteman. **53** (1992) 323–343
Average derivatives • How sensitive are ——? Wolfgang Hardle and A.B. Tsybakov. **58** (1993) 31–48

Bayes estimator, empirical • Testing and estimating location vectors when the error covariance matrix is unknown. William Griffiths and George Judge. **54** (1992) 121–138
Bayes inference in the Tobit censored regression model. Siddhartha Chib. **51** (1992) 79–99
Bayes regression with autoregressive errors: A Gibbs sampling approach. Siddhartha Chib. **58** (1993) 275–294
Bayes solution • A general framework for panel data models with an application to Canadian customer-dialed long distance telephone service. Cheng Hsiao, Trent W. Appelbe, and Christopher R. Dineen. **59** (1993) 63–86
Bayesian analysis of logit models using natural conjugate priors. Gary Koop and Dale J. Poirier. **56** (1993) 323–340
Bayesian and non-Bayesian methods for combining models and forecasts with applications to forecasting international growth rates. Chung-ki Min and Arnold Zellner. **56** (1993) 89–118
Bayesian approach
A —— to state space multivariate time series modeling. Jeffrey H. Dorfman and Arthur M. Havenner. **52** (1992) 315–346
Co-integration and trend-stationarity in macroeconomic time series: Evidence from the likelihood function. David N. DeJong. **52** (1992) 347–370
Bayesian autoregression
Discussion: Forecasting time series with common seasonal patterns. John Geweke. **55** (1993) 201–202
Forecasting time series with common seasonal patterns. Fabio Canova. **55** (1993) 173–200
Bayesian inference • Robust —— in elliptical regression models. Jacek Osiewalski and Mark F.J. Steel. **57** (1993) 345–363
Bayesian marginal equivalence of elliptical regression models. Jacek Osiewalski and Mark F.J. Steel. **59** (1993) 391–403
Bayesian prediction tests for structural stability. Jeffrey A. Mills. **52** (1992) 381–388
Bayesian test statistics • Exogeneity tests in a truncated structural equation. Hiroki Tsurumi and Peter Mehr. **56** (1993) 371–396
Bayesian vector autoregressive models
Discussion: Seasonal ——. Arnold Zellner. **55** (1993) 231–234
Seasonal ——: A search along some time domain priors. Jacques Raynauld and Jean-Guy Simonato. **55** (1993) 203–229
Bias
An econometric approach to the construction of generalized Theil-Tornqvist indices for multilateral comparisons. E.A. Selvanathan and D.S. Prasada Rao. **54** (1992) 335–346
Discrete/continuous models of consumer demand with binding non-negativity constraints. Jeongwen Chiang and Lung-Fei Lee. **54** (1992) 79–93
More on grouping coarseness in linear normal regression models. Steven B. Caudill. **52** (1992) 407–417
Bias, asymptotic
Discussion: The effect of seasonal adjustment filters on tests for a unit root. Francis X. Diebold. **55** (1993) 99–103
The effect of seasonal adjustment filters on tests for a unit root. Eric Ghysels and Pierre Perron. **55** (1993) 57–98
Bias, selection • Experimental estimates of the impact of wage subsidies. Jeffrey A. Dubin and Douglas Rivers. **56** (1993) 219–242
Bias correction methods • Selectivity —— in polychotomous sample selection models. Carl P. Schmertmann. **60** (1994) 101–132
Binary choice • Distribution theory for the analysis of —— under uncertainty with nonparametric estimation of expectations. Hyungtaik Ahn and Charles F. Manski. **56** (1993) 291–321

Binary choice model(s)
A simulation approach to the problem of computing Cox's statistic for testing nonnested models. M. Hashem Pesaran and Bahram Pesaran. **57** (1993) 377–392
Specification tests for —— based on index quantiles. Roger W. Klein. **59** (1993) 343–375
Binary response
Nonparametric bootstrap confidence intervals for discrete regression functions. M.C. Rodriguz-Campos and R. Cao-Abad. **58** (1993) 207–222
Semiparametric estimation of a work-trip mode choice model. Joel L. Horowitz. **58** (1993) 49–70
Binding nonnegativity constraints • Discrete/continuous models of consumer demand with ——. Jeongwen Chiang and Lung-Fei Lee. **54** (1992) 79–93
Bivariate censored selection model • Efficiency bounds for some semiparametric selection models. Whitney K. Newey and James L. Powell. **58** (1993) 169–184
Block identifiability • Tests of overidentification and predetermination in simultaneous equation models. T.W. Anderson and Naoto Kunitomo. **54** (1992) 49–78
Bootstrap confidence intervals • Nonparametric —— for discrete regression functions. M.C. Rodriguz-Campos and R. Cao-Abad. **58** (1993) 207–222
Bounds, efficiency • Calculating the (local) semiparametric efficiency bounds for the generated regressors problem. Paul Rilstone. **56** (1993) 357–370

C-alpha test • Joint and separate score tests for state dependence and Punobserved heterogeneity. Sanjiv Jaggia and Pravin K. Trivedi. **60** (1994) 273–291
Canonical correlations • Five alternative methods of estimating long-run equilibrium relationships. Jesus Gonzalo. **60** (1994) 203–233
Capacity utilization • Morrison's measure of ——: A critique. James H. Hauver and Jet Yee. **52** (1992) 403–406
Capital asset pricing model • Measuring risk aversion from excess returns on a stock index. Ray Chou, Robert F. Engle, and Alex Kane. . . **52** (1992) 201–224
Categorical data
Discussion: The importance of seasonality in inventory models. Jean-Marie Dufour. **55** (1993) 129–133
The importance of seasonality in inventory models: Evidence from business survey data. Marc Nerlov, David Ross, and Douglas Willson. **55** (1993) 105–128
Causality • Another look at the evidence on money-income ——. Benjamin M. Friedman and Kenneth N. Kuttner. **57** (1993) 189–203
Censored regression model
Bayes inference in the Tobit ——. Siddhartha Chib. **51** (1992) 79–99
Orthogonality conditions for Tobit models with fixed effects and lagged dependent variables. Bo E. Honore. **59** (1993) 35–61
Some aspects of measurement error in a ——. Andrew A. Weiss. . . **56** (1993) 169–188
Censored selection model(s)
Efficiency bounds for some semiparametric selection models. Whitney K. Newey and James L. Powell. **58** (1993) 169–184
Semiparametric estimation of —— with a nonparametric selection mechanism. Hyungtaik Ahn and James L. Powell. **58** (1993) 3–29
Characteristics approach • Econometric issues of estimating hedonic price functions: With an application to the U.S. market for automobiles. Nestor M. Arguea and Cheng Hsiao. **56** (1993) 243–267
Characteristics function • Computing p-values for the generalized Durbin-Watson and other invariant test statistics. Craig F. Ansley, Robert Kohn, and Thomas S. Shively. **54** (1992) 277–300
Chi-square estimation • Minimum —— and tests for model selection. Quang H. Vuong and Weiren Wang. **56** (1993) 141–168

Chi-square test(s)
Efficient estimation and testing of cointegrating vectors in the presence of deterministic trends. Bruce E. Hansen. **53** (1992) 87–121
Specification diagnostics for duration models: A martingale approach. Brian P. McCall. **60** (1994) 293–312
Choice analysis • How sensitive are average derivatives? Wolfgang Hardle and A.B. Tsybakov. **58** (1993) 31–48
Choice model(s)
Nonparametric identification and estimation of polychotomous ——. Rosa L. Matzkin. **58** (1993) 137–168
On the computation of semiparametric estimates in limited dependent variable models. C.A.P. Pinkse. **58** (1993) 185–205
Semiparametric estimation of a work-trip mode ——. Joel L. Horowitz. **58** (1993) 49–70
Some efficiency bounds for semiparametric discrete ——. T. Scott Thompson. **58** (1993) 257–274
Specification tests for binary —— based on index quantiles. Roger W. Klein. **59** (1993) 343–375
Choice probabilities • Discrete/continuous models of consumer demand with binding nonnegativity constraints. Jeongwen Chiang and Lung-Fei Lee. **54** (1992) 79–93
Classical prediction tests • Bayesian prediction tests for structural stability. Jeffrey A. Mills. **52** (1992) 381–388
Coefficient stability • Alternative point-optimal tests for regression ——. Robert D. Brooks. **57** (1993) 365–376
Cohort aggregation techniques
Identification and estimation of dynamic models with a time series of repeated cross sections. Robert Moffitt. **59** (1993) 99–123
Labour supply and intertemporal substitution. Richard Blundell, Costas Meghir, and Pedro Neves. **59** (1993) 137–160
Minimum MSE estimation of a regression model with fixed effects from a series of cross-sections. Marno Verbeek and Theo Nijman. **59** (1993) 125–136
Cohort approach • Minimum MSE estimation of a regression model with fixed effects from a series of cross-sections. Marno Verbeek and Theo Nijman. **59** (1993) 125–136
Cointegrating vectors
Efficient estimation and testing of —— in the presence of deterministic trends. Bruce E. Hansen. **53** (1992) 87–121
Five alternative methods of estimating long-run equilibrium relationships. Jesus Gonzalo. **60** (1994) 203–233
Cointegration
Discussion: Seasonal ——. Denise R. Osborn. **55** (1993) 299–303
Heteroskedastic ——. Bruce E. Hansen. **54** (1992) 139–158
Maximum likelihood inference on —— and seasonal cointegration. Hahn Shik Lee. **54** (1992) 1–47
Persistence, ——, and aggregation: A disaggregated analysis of output fluctuations in the U.S. economy. M.H. Pesaran, R.G. Pierse and K.C. Lee. **56** (1993) 57–88
Seasonal ——: The Japanese consumption function. R.F. Engle, C.W.J. Granger, S. Hylleberg, and H.S. Lee. **55** (1993) 275–298
Spurious regressions and residual-based tests for —— when regressors are cointegrated. In Choi. **60** (1994) 313–320
Cointegration and trend-stationarity in macroeconomic time series: Evidence from the likelihood function. David N. DeJong. **52** (1992) 347–370
Cointegration in partial systems and the efficiency of single-equation analysis. Soren Johansen. **52** (1992) 389–402

Cointegration analysis • Testing structural hypotheses in a multivariate —— of the PPP and the UIP for UK. Soren Johansen and Katarina Juselius. **53** (1992) 211–244
Component time series models • Unobserved —— with ARCH disturbances. Andrew Harvey, Esther Ruiz, and Enrique Sentana. **52** (1992) 129–157
Conditional covariance estimates • Filtering and forecasting with misspecified ARCH models I: Getting the right variance with the wrong model. Daniel B. Nelson. **52** (1992) 61–90
Conditional heteroskedasticity • Unit root tests with ——. Kiwhan Kim and Peter Schmidt. **59** (1993) 287–300
Conditional mean and conditional variance • Measuring risk aversion from excess returns on a stock index. Ray Chou, Robert F. Engle, and Alex Kane. **52** (1992) 201–224
Conditional mean estimators • A comparison of risk-premium forecasts implied by parametric versus nonparametric ——. Thomas H. McCurdy and Thanasis Stengos. **52** (1992) 225–244
Conditional score • Joint and separate score tests for state dependence and unobserved heterogeneity. Sanjiv Jaggia and Pravin K. Trivedi. . **60** (1994) 273–291
Conditional variance restriction • The potential for efficiency gains in estimation from the use of additional moment restrictions. Gordon C.R. Kemp. **53** (1992) 387–399
Conditional variance specification • Qualitative threshold ARCH models. Christian Gourieroux and Alain Monfort. **52** (1992) 159–199
Conditional variances • Prediction in dynamic models with time-dependent ——. Richard T. Baillie and Tim Bollerslev. **52** (1992) 91–113
Conditional volatility
Implied ARCH models from options prices. Robert F. Engle and Chowdhury Mustafa. **52** (1992) 289–311
Stock market volatility and the information content of stock index options. Theodore E. Day and Craig M. Lewis. **52** (1992) 267–287
Confidence intervals • Nonparametric bootstrap —— for discrete regression functions. M.C. Rodriguz-Campos and R. Cao-Abad. **58** (1993) 207–222
Confidence sets centered at James-Stein estimators: A surprise concerning the unknown-variance case. J.T. Gene Hwang and Aman Ullah. **60** (1994) 145–156
Conjugate priors • Bayesian analysis of logit models using natural ——. Gary Koop and Dale J. Poirier. **56** (1993) 323–340
Consumer demand
Discrete/continuous models of —— with binding nonnegativity constraints. Jeongwen Chiang and Lung-Fei Lee. **54** (1992) 79–93
Frequency of purchase and the estimation of demand systems. Costas Meghir and Jean-Marc Robin. **53** (1992) 53–85
Consumption data
Discussion: The effect of sampling error on the time series behavior of ——. Allan W. Gregory and Tony Wirjanto. **55** (1993) 267–273
The effect of sampling error on the time series behavior of ——. William R. Bell and David W. Wilcox. **55** (1993) 235–265
Consumption function
Discussion: Seasonal cointegration. Denise R. Osborn. **55** (1993) 299–303
Seasonal cointegration: The Japanese ——. R.F. Engle, C.W.J. Granger, S. Hylleberg, and H.S. Lee. **55** (1993) 275–298
Continuous-time competing-risks model • Structural duration analysis of management data. Keunkwan Ryu. **57** (1993) 91–115
Continuous time model(s)
A nonnested approach to testing —— against discrete alternatives. Marcus J. Chambers. **57** (1993) 319–343
Simultaneous equations for hazards: Marriage duration and fertility timing. Lee A. Lillard. **56** (1993) 189–217

The impact of training on the frequency and duration of employment. R. Mark Gritz. **57** (1993) 21–51
Continuous-time panel • A method for the analysis of the timing and magnitude of events in a ——: The effects of British incomes policy, 1950–73. Masako Kurosawa and Stephen Pudney. **59** (1993) 161–185
Control variables • Regression-based methods for using —— in Monte Carlo experiments. Russell Davidson and James G. MacKinnon. **54** (1992) 203–222
Cornish-Fisher asymptotic expansion • Prediction in dynamic models with time-dependent conditional variances. Richard T. Baillie and Tim Bollerslev. **52** (1992) 91–113
Correlated effects • On the testing of —— with panel data. Manuel Arellano. **59** (1993) 87–97
Cost efficiency • A simplification of the Kopp-Diewert method of decomposing —— and some implications. Yaw M. Mensah. **60** (1994) 133–144
Cost frontiers • Measuring technical efficiency with panel data: A dual approach. Scott E. Atkinson and Christopher Cornwell. **59** (1993) 257–261
Covariance estimates, conditional • Filtering and forecasting with misspecified ARCH models I: Getting the right variance with the wrong model. Daniel B. Nelson. **52** (1992) 61–90
Covariance matrix
Heteroskedastic cointegration. Bruce E. Hansen. **54** (1992) 139–158
Quasi-Aitken estimation for heteroskedasticity of unknown form. John G. Cragg. **54** (1992) 179–201
Testing and estimating location vectors when the error —— is unknown. William Griffiths and George Judge. **54** (1992) 121–138
Cox test • A nonnested approach to testing continuous time models against discrete alternatives. Marcus J. Chambers. **57** (1993) 319–343
Cox's statistic • A simulation approach to the problem of computing —— for testing nonnested models. M. Hashem Pesaran and Bahram Pesaran. 57 (1993) 377–392
Correlation coefficients • Measuring the unidentified parameter of the extended Roy model of selectivity. Wim P.M. Vijverberg. **57** (1993) 69–89
Cross-sectional data
Discussion: The importance of seasonality in inventory models. Jean-Marie Dufour. **55** (1993) 129–133
The importance of seasonality in inventory models: Evidence from business survey data. Marc Nerlov, David Ross, and Douglas Willson. **55** (1993) 105–128
Cross-sectional observations • The optimal choice of controls and pre-experimental observations. Theo Nijman and Marno Verbeek. . . **51** (1992) 183–189
Cross-sections
Identification and estimation of dynamic models with a time series of repeated ——. Robert Moffitt. **59** (1993) 99–123
Minimum MSE estimation of a regression model with fixed effects from a series of ——. Marno Verbeek and Theo Nijman. **59** (1993) 125–136

Data augmentation algorithm • Bayes inference in the Tobit censored regression model. Siddhartha Chib. **51** (1992) 79–99
Data envelopment analysis • Finite sample evidence on the performance of stochastic frontiers and —— using panel data. Byeong-Ho Gong and Robin C. Sickles. **51** (1992) 259–284
Deaton's errors-in-variables model • Minimum MSE estimation of a regression model with fixed effects from a series of cross-sections. Marno Verbeek and Theo Nijman. **59** (1993) 125–136
Decision rules • Discrete/continuous models of consumer demand with binding nonnegativity constraints. Jeongwen Chiang and Lung-Fei Lee. **54** (1992) 79–93

Demand equations • Discrete/continuous models of consumer demand with binding nonnegativity constraints. Jeongwen Chiang and Lung-Fei Lee. **54** (1992) 79–93
Demand systems
Coherency and regularity of —— with equality and inequality constraints. Arthur van Soest, Arie Kapteyn, and Peter Kooreman. . **57** (1993) 161–188
Frequency of purchase and the estimation of ——. Costas Meghir and Jean-Marc Robin. **53** (1992) 53–85
Density and regression functions • Maximum entropy estimation of ——. Hang K. Ryu. **56** (1993) 397–440
Density estimator • Highest predictive —— in regression models. Shigeru Iwata. **53** (1992) 271–295
Dependent variable models
A pseudo-R-squared measure for limited and qualitative ——. Thomas Laitila. **56** (1993) 341–356
Smooth unbiased multivariate probability simulators for maximum likelihood estimation of limited ——. Axel Borsch-Supan and Vassilis A. Hajivassiliou. **58** (1993) 347–368
Dependent variables • Orthogonality conditions for Tobit models with fixed effects and lagged ——. Bo E. Honore. **59** (1993) 35–61
Deterministic trend(s)
Efficient estimation and testing of cointegrating vectors in the presence of ——. Bruce E. Hansen. **53** (1992) 87–121
Testing the null hypothesis of stationarity against the alternative of a unit root: How sure are we that economic time series have a unit root? Denis Kwiatkowski, Peter C.B. Phillips, Peter Schmidt, and Yongcheol Shin. **54** (1992) 159–178
The impact of stochastic and —— on money-output causality: A multi-country investigation (45 (1990) 291–308). Errata. Robert Krol and Lee E. Ohanian. **58** (1993) 405
Detrended time series • Higher-order sample autocorrelations and the unit root hypothesis. Herman J. Bierens. **57** (1993) 137–160
Dickey-Fuller tests
Testing for a unit root in time series using instrumental variable estimators with pretest data based model selection. Alastair Hall. **54** (1992) 223–250
Unit root tests with conditional heteroskedasticity. Kiwhan Kim and Peter Schmidt. **59** (1993) 287–300
Discrete choice models
Dynamic choice in social settings: Learning from the experiences of others. Charles F. Manski. **58** (1993) 121–136
How sensitive are average derivatives? Wolfgang Hardle and A.B. Tsybakov. **58** (1993) 31–48
Some efficiency bounds for semiparametric ——. T. Scott Thompson. **58** (1993) 257–274
Discrete/continuous models of consumer demand with binding nonnegativity constraints. Jeongwen Chiang and Lung-Fei Lee. **54** (1992) 79–93
Discrete regression functions • Nonparametric bootstrap confidence intervals for ——. M.C. Rodriguz-Campos and R. Cao-Abad. **58** (1993) 207–222
Discrete response • Median regression for ordered ——. Myoung-jae Lee. **51** (1992) 59–77
Discrete response analysis
Nonparametric and semiparametric approaches to ——. Edited by Wolfgang Hardle and Charles F. Manski. **58** (1993) 1–274
Editors' introduction. Nonparametric and semiparametric approaches to ——. Wolfgang Hardle and Charles F. Manski. **58** (1993) 1–2
Discrete time models • A nonnested approach to testing continuous time models against discrete alternatives. Marcus J. Chambers. **57** (1993) 319–343
Distributed lags and leads • Estimation of polynomial —— with end point constraints. Donald W.K. Andrews and Ray C. Fair. **53** (1992) 123–139

Distributed random variables • Orthogonality conditions for Tobit models with fixed effects and lagged dependent variables. Bo E. Honore. **59** (1993) 35–61
Distribution theory • Asymptotic and finite sample —— for IV estimators and tests in partially identified structural equations. In Choi and Peter C.B. Phillips. **51** (1992) 113–150
Distribution theory for the analysis of binary choice under uncertainty with nonparametric estimation of expectations. Hyungtaik Ahn and Charles F. Manski. **56** (1993) 291–321
Disturbance covariance matrix • Robustness of size of tests of autocorrelation and heteroscedasticity to nonnormality. Merran Evans. **51** (1992) 7–24
Disturbances • Properties of ordinary least squares estimators in regression models with nonspherical ——. Denzil G. Fiebig, Michael McAleer, and Robert Bartels. **54** (1992) 321–334
Divisia • A revealed preference test for weakly separable utility maximization with incomplete adjustment. James L. Swofford and Gerald A. Whitney. **60** (1994) 235–249
Dual cost function • Measuring technical efficiency with panel data: A dual approach. Scott E. Atkinson and Christopher Cornwell. **59** (1993) 257–261
Duration analysis • Structural —— of management data. Keunkwan Ryu. **57** (1993) 91–115
Duration data
A method for the analysis of the timing and magnitude of events in a continuous-time panel: The effects of British incomes policy, 1950–73. Masako Kurosawa and Stephen Pudney. **59** (1993) 161–185
Modelling inaccuracies in job-search ——. Nicola Torelli and Ugo Trivellato. **59** (1993) 187–211
Duration dependence • Joint and separate score tests for state dependence and unobserved heterogeneity. Sanjiv Jaggia and Pravin K. Trivedi. **60** (1994) 273–291
Duration estimators • Semiparametric proportional hazards estimation of competing risks models with time-varying covariates. Glenn T. Sueyoshi. **51** (1992) 25–58
Duration models
A method for the analysis of the timing and magnitude of events in a continuous-time panel: The effects of British incomes policy, 1950–73. Masako Kurosawa and Stephen Pudney. **59** (1993) 161–185
Specification diagnostics for ——: A martingale approach. Brian P. McCall. **60** (1994) 293–312
The impact of training on the frequency and duration of employment. R. Mark Gritz. **57** (1993) 21–51
Durbin-Watson • Computing p-values for the generalized —— and other invariant test statistics. Craig F. Ansley, Robert Kohn, and Thomas S. Shively. **54** (1992) 277–300
Durbin-Watson test
On the power function of the ——. Robert Bartels. **51** (1992) 101–112
Robustness to nonnormality of the —— for autocorrelation. Mukhtar M. Ali and Subhash C. Sharma. **57** (1993) 117–136
Dynamic choice in social settings: Learning from the experiences of others. Charles F. Manski. **58** (1993) 121–136
Dynamic errors-in-variables models • The identification of multivariate linear ——. Eugen Nowak. **59** (1993) 213–227
Dynamic-factor model • A multi- —— for stock returns. Victor Ng, Robert F. Engle, and Michael Rothschild. **52** (1992) 245–266
Dynamic linear models for time series components. Estela Bee Dagum and Benoit Quenneville. **55** (1993) 333–351
Dynamic linear models with Markov-switching. Chang-Jin Kim. **60** (1994) 1–22
Dynamic linear models • Discussion: —— for time series components. David F. Findley. **55** (1993) 353–356

Dynamic models
Identification and estimation of —— with a time series of repeated cross sections. Robert Moffitt. **59** (1993) 99–123
Prediction in —— with time-dependent conditional variances. Richard T. Baillie and Tim Bollerslev. **52** (1992) 91–113
Dynamic optimization problem • Labour supply and intertemporal substitution. Richard Blundell, Costas Meghir, and Pedro Neves. **59** (1993) 137–160

Econometric approach • An —— to the construction of generalized Theil-Tornqvist indices for multilateral comparisons. E.A. Selvanathan and D.S. Prasada Rao. **54** (1992) 335–346
Econometric issues of estimating hedonic price functions: With an application to the U.S. market for automobiles. Nestor M. Arguea and Cheng Hsiao. **56** (1993) 243–267
Econometric modeling • Stochastic linear trends: Models and estimators. Augustin Maravall. **56** (1993) 5–37
Econometric models
Editor's introduction. Seasonality and ——. Eric Ghysels. **55** (1993) 1–8
Seasonality and ——. Edited by Eric Ghysels. **55** (1993) 1–356
Econometrics
Editors' introduction. The —— of panels and pseudo panels. Carlo Carraro, Franco Peracchi, and Guglielmo Weber. **59** (1993) 1–4
Studies in —— in honor of Dennis J. Aigner. Edited by Cheng Hsiao and Paul Ruud. **56** (1993) 1–267
The —— of panels and pseudo panels. Edited by Carlo Carraro, Franco Peracchi, and Guglielmo Weber. **59** (1993) 1–211
Economic theory
Dynamic choice in social settings: Learning from the experiences of others. Charles F. Manski. **58** (1993) 121–136
Fellow's opinion: Evaluating ——. Clive W.J. Granger. **51** (1992) 3–5
Economic time series • Testing the null hypothesis of stationarity against the alternative of a unit root: How sure are we that —— have a unit root? Denis Kwiatkowski, Peter C.B. Phillips, Peter Schmidt, and Yongcheol Shin. **54** (1992) 159–178
Efficiency
Cointegration in partial systems and the —— of single-equation analysis. Soren Johansen. **52** (1992) 389–402
Measuring technical with panel data: A dual approach. Scott E. Atkinson and Christopher Cornwell. **59** (1993) 257–261
Properties of ordinary least squares estimators in regression models with nonspherical disturbances. Denzil G. Fiebig, Michael McAleer, and Robert Bartels. **54** (1992) 321–334
Quasi-Aitken estimation for heteroskedasticity of unknown form. John G. Cragg. **54** (1992) 179–201
Efficiency bound(s)
Adaptive estimation in time series regression models. Douglas G. Steigerwald. **54** (1992) 251–275
Calculating the (local) semiparametric —— for the generated regressors problem. Paul Rilstone. **56** (1993) 357–370
Some —— for semiparametric discrete choice models. T. Scott Thompson. **58** (1993) 257–274
Efficiency bounds for some semiparametric selection models. Whitney K. Newey and James L. Powell. **58** (1993) 169–184
Efficiency gains • The potential for —— in estimation from the use of additional moment restrictions. Gordon C.R. Kemp. **53** (1992) 387–399

Efficiency measurement • A simplification of the Kopp-Diewert method of decomposing cost efficiency and some implications. Yaw M. Mensah. **60** (1994) 133–144
EGARCH models • Stock market volatility and the information content of stock index options. Theodore E. Day and Craig M. Lewis. **52** (1992) 267–287
Eigenvalue bounds • Computing p-values for the generalized Durbin-Watson and other invariant test statistics. Craig F. Ansley, Robert Kohn, and Thomas S. Shively. **54** (1992) 277–300
Elliptical regression models
Bayesian marginal equivalence of ——. Jacek Osiewalski and Mark F.J. Steel. **59** (1993) 391–403
Robust Bayesian inference in ——. Jacek Osiewalski and Mark F.J. Steel. **57** (1993) 345–363
Employment outcomes • The impact of training on the frequency and duration of employment. R. Mark Gritz. **57** (1993) 21–51
Employment time series • Nonparametric evidence on asymmetry in business cycles using aggregate ——. Robert Hussey. **51** (1992) 217–231
End point constraints • Estimation of polynomial distributed lags and leads with ——. Donald W.K. Andrews and Ray C. Fair. **53** (1992) 123–139
Endogenous regimes • Coherency and regularity of demand systems with equality and inequality constraints. Arthur van Soest, Arie Kapteyn, and Peter Kooreman. **57** (1993) 161–188
Engel curves • Frequency of purchase and the estimation of demand systems. Costas Meghir and Jean-Marc Robin. **53** (1992) 53–85
Entropy estimation • Maximum —— of density and regression functions. Hang K. Ryu. **56** (1993) 397–440
Entropy Lorenz curves • Maximum ——. Juhani Holm. **59** (1993) 377–389
Equality and inequality constraints • Coherency and regularity of demand systems with ——. Arthur van Soest, Arie Kapteyn, and Peter Kooreman. **57** (1993) 161–188
Equicontinuity concepts • Generic uniform convergence and —— for random functions: An exploration of the basic structure. Benedikt M. Potscher and Ingmar R. Prucha. **60** (1994) 23–63
Equity index A comparison of risk-premium forecasts implied by parametric versus nonparametric conditional mean estimators. Thomas H. McCurdy and Thanasis Stengos. **52** (1992) 225–244
Error, measurement • Some aspects of measurement error in a censored regression model. Andrew A. Weiss. **56** (1993) 169–188
Error autocorrelation • Testing the null hypothesis of stationarity against the alternative of a unit root: How sure are we that economic time series have a unit root? Denis Kwiatkowski, Peter C.B. Phillips, Peter Schmidt, and Yongcheol Shin. **54** (1992) 159–178
Error component model(s)
Monte Carlo results on several new and existing tests for the ——. Badi H. Baltagi, Young-Jae Chang, and Qi Li. **54** (1992) 95–120
Monte Carlo results on several new and existing tests for the —— (Vol. 54, No. 1–3 (1992) pp. 95–120). Erratum. Badi H. Baltagi, Young-Jae Chang, and Qi Li. **59** (1993) 405
Error correction model(s)
Estimating long-run relationships in economics: A comparison of different approaches. Brett Inder. **57** (1993) 53–68
Five alternative methods of estimating long-run equilibrium relationships. Jesus Gonzalo. **60** (1994) 203–233
Error covariance matrix • Testing and estimating location vectors when the —— is unknown. William Griffiths and George Judge. **54** (1992) 121–138
Error distribution(s)
Robustness to nonnormality of the Durbin-Watson test for autocorrelation. Mukhtar M. Ali and Subhash C. Sharma. **57** (1993) 117–136

Prediction in dynamic models with time-dependent conditional variances. Richard T. Baillie and Tim Bollerslev. **52** (1992) 91–113
Error models • Semiparametric quasilikelihood and variance function estimation in measurement ——. J.H. Sepanski and R.J. Carroll. **58** (1993) 223–256
Error variance • Estimation of the —— after a preliminary-test of homogeneity in a regression model with spherically symmetric disturbances. Judith A. Giles. **53** (1992) 345–361
Error variance decomposition • Another look at the evidence on money-income causality. Benjamin M. Friedman and Kenneth N. Kuttner. **57** (1993) 189–203
Errors-in-variables models
Instrumental variables estimation in —— when instruments are correlated with errors. Shigeru Iwata. **53** (1992) 297–322
The identification of multivariate linear dynamic ——. Eugen Nowak. **59** (1993) 213–227
Estimation algorithms • Global optimization of statistical functions with simulated annealing. William L. Goffe, Gary D. Ferrier, and John Rogers. **60** (1994) 65–99
European monetary systems • Estimating limited-dependent rational expectations models with an application to exchange rate determination in a target zone. M. Hashem Pesaran and Hossein Samiei. **53** (1992) 141–163
Exact and approximate tests • A comparison of several —— for structural shift under heteroscedasticity. Jerry G. Thursby. **53** (1992) 363–386
Exact densities for variance estimators of the structural disturbances in simultaneous equations models. Murray D. Smith. **60** (1994) 157–180
Exchange rate data
A comparison of risk-premium forecasts implied by parametric versus nonparametric conditional mean estimators. Thomas H. McCurdy and Thanasis Stengos. **52** (1992) 225–244
Prediction in dynamic models with time-dependent conditional variances. Richard T. Baillie and Tim Bollerslev. **52** (1992) 91–113
Exchange rate determination • Estimating limited-dependent rational expectations models with an application to —— in a target zone. M. Hashem Pesaran and Hossein Samiei. **53** (1992) 141–163
Exogeneity, weak • Cointegration in partial systems and the efficiency of single-equation analysis. Soren Johansen. **52** (1992) 389–402
Exogeneity test • The spurious effect of unit roots on vector autoregressions: An analytical study. Hiro Y. Toda and Peter C.B. Phillips. **59** (1993) 229–255
Exogeneity tests in a truncated structural equation. Hiroki Tsurumi and Peter Mehr. **56** (1993) 371–396
Experimental design, optimal • The optimal choice of controls and pre-experimental observations. Theo Nijman and Marno Verbeek. . . **51** (1992) 183–189
Exponential transformation • Some generalizations on the algebra of I(1) processes. Luigi Ermini and Clive W.J. Granger. **58** (1993) 369–384

F sets • Confidence sets centered at James-Stein estimators: A surprise concerning the unknown-variance case. J.T. Gene Hwang and Aman Ullah. **60** (1994) 145–156
F test statistic • Testing linear restrictions on coefficients in a linear regression model with proxy variables and spherically symmetric disturbances. Kazuhiro Ohtani and Judith Giles. **57** (1993) 393–406
Fertility timing • Simultaneous equations for hazards: Marriage duration and ——. Lee A. Lillard. **56** (1993) 189–217
Filtering
Discussion: The effect of seasonal adjustment filters on tests for a unit root. Francis X. Diebold. **55** (1993) 99–103
Dynamic linear models with Markov-switching. Chang-Jin Kim. . . . **60** (1994) 1–22

The effect of seasonal adjustment filters on tests for a unit root. Eric Ghysels and Pierre Perron. **55** (1993) 57–98
Filtering and forecasting with misspecified ARCH models I: Getting the right variance with the wrong model. Daniel B. Nelson. **52** (1992) 61–90
Finance
ARCH modeling in ——: A review of the theory and empirical evidence. Tim Bollerslev, Ray Y. Chou, and Kenneth F. Kroner. . . . **52** (1992) 5–59
ARCH models in ——. Edited by Robert F. Engle and Michael Rothschild. **52** (1992) 1–311
Finite-order autoregression • Saddlepath solutions for multivariate linear rational expectations models. Michael K. Salemi and Jaeyeong Song. **53** (1992) 245–269
Finite sample behavior
Discussion: The effect of seasonal adjustment filters on tests for a unit root. Francis X. Diebold. **55** (1993) 99–103
Maximum likelihood inference on cointegration and seasonal cointegration. Hahn Shik Lee. **54** (1992) 1–47
On the —— of adaptive estimators. Douglas G. Steigerwald. **54** (1992) 371–400
Semiparametric proportional hazards estimation of competing risks models with time-varying covariates. Glenn T. Sueyoshi. **51** (1992) 25–58
The effect of seasonal adjustment filters on tests for a unit root. Eric Ghysels and Pierre Perron. **55** 91993) 57–98
Finite sample critical properties
Discussion: Seasonal unit roots in aggregate U.S. data. David A. Dickey. **55** (1993) 329–331
Seasonal unit roots in aggregate U.S. data. J. Joseph Beaulieu and Jeffrey A. Miron. **55** (1993) 305–328
Finite sample distribution theory • Asymptotic and —— for IV estimators and tests in partially identified structural equations. In Choi and Peter C.B. Phillips. **51** (1992) 113–150
Finite sample evidence on the performance of stochastic frontiers and data envelopment analysis using panel data. Byeong-Ho Gong and Robin C. Sickles. **51** (1992) 259–284
Finite-sample properties • Estimation and testing in the random effects probit model. David K. Guilkey and James L. Murphy. **59** (1993) 301–317
Finite-sample properties of single-equation estimators under structural change. Jiro Hodoshima. **53** (1992) 189–209
Finite sample size • Testing the null hypothesis of stationarity against the alternative of a unit root: How sure are we that economic time series have a unit root? Denis Kwiatkowski, Peter C.B. Phillips, Peter Schmidt, and Yongcheol Shin. **54** (1992) 159–178
Finite sampling
Adaptive estimation in time series regression models. Douglas G. Steigerwald. **54** (1992) 251–275
Testing for a unit root by frequency domain regression. In Choi and Peter C.B. Phillips. **59** (1993) 263–286
Firm behavior
Discussion: The importance of seasonality in inventory models. Jean-Marie Dufour. **55** (1993) 129–133
The importance of seasonality in inventory models: Evidence from business survey data. Marc Nerlov, David Ross, and Douglas Willson. **55** (1993) 105–128
Fixed effects
A method for the analysis of the timing and magnitude of events in a continuous-time panel: The effects of British incomes policy, 1950–73. Masako Kurosawa and Stephen Pudney. **59** (1993) 161–185
Minimum MSE estimation of a regression model with —— from a series of cross-sections. Marno Verbeek and Theo Nijman. . . . **59** (1993) 125–136

Orthogonality conditions for Tobit models with —— and lagged dependent variables. Bo E. Honore. **59** (1993) 35–61
Simultaneous equations and panel data. Christopher Cornwell, Peter Schmidt, and Donald Wyhowski. **51** (1992) 151–181
Fixed interval smoother
Discussion: Dynamic linear models for time series components. David F. Findley. **55** (1993) 353–356
Dynamic linear models for time series components. Estela Bee Dagum and Benoit Quenneville. **55** (1993) 333–351
Flexible functional form approach • Maximum entropy estimation of density and regression functions. Hang K. Ryu. **56** (1993) 397–440
Forecast error variance decomposition • Another look at the evidence on money-income causality. Benjamin M. Friedman and Kenneth N. Kuttner. **57** (1993) 189–203
Forecasting
A Bayesian approach to state space multivariate time series modeling. Jeffrey H. Dorfman and Arthur M. Havenner. **52** (1992) 315–346
Bayesian and non-Bayesian methods for combining models and forecasts with applications to —— international growth rates. Chungki Min and Arnold Zellner. **56** (1993) 89–118
Discussion: —— time series with common seasonal patterns. John Geweke. **55** (1993) 201–202
Filtering and —— with misspecified ARCH models I: Getting the right variance with the wrong model. Daniel B. Nelson. **52** (1992) 61–90
Prediction in dynamic models with time-dependent conditional variances. Richard T. Baillie and Tim Bollerslev. **52** (1992) 91–113
Forecasting time series with common seasonal patterns. Fabio Canova. **55** (1993) 173–200
Foreign exchange market behavior • Adaptive estimation in time series regression models. Douglas G. Steigerwald. **54** (1992) 251–275
Foreign exchange rates • Prediction in dynamic models with time-dependent conditional variances. Richard T. Baillie and Tim Bollerslev. . **52** (1992) 91–113
Forward rate unbiasedness • Adaptive estimation in time series regression models. Douglas G. Steigerwald. **54** (1992) 251–275
Fractional models • Maximum likelihood estimation of stationary univariate fractionally integrated time series models. Fallaw Sowell. . . . **53** (1992) 165–188
Frequency domain approach
Discussion: Forecasting time series with common seasonal patterns. John Geweke. **55** (1993) 201–202
Forecasting time series with common seasonal patterns. Fabio Canova. **55** (1993) 173–200
Seasonality and approximation errors in rational expectations models. Lars Peter Hansen and Thomas J. Sargent. **55** (1993) 21–55
Frequency domain regression • Testing for a unit root by ——. In Choi and Peter C.B. Phillips. **59** (1993) 263–286
Functional forms • Maximum entropy estimation of density and regression functions. Hang K. Ryu. **56** (1993) 397–440

GARCH disturbances • Prediction in dynamic models with time-dependent conditional variances. Richard T. Baillie and Tim Bollerslev. . . . **52** (1992) 91–113
GARCH model(s)
Implied ARCH models from options prices. Robert F. Engle and Chowdhury Mustafa. **52** (1992) 289–311
Stock market volatility and the information content of stock index options. Theodore E. Day and Craig M. Lewis. **52** (1992) 267–287
Unit root tests with conditional heteroskedasticity. Kiwhan Kim and Peter Schmidt. **59** (1993) 287–300

GARCH processes
Local scale models: State space alternative to integrated ——. Neil Shephard. **60** (1994) 181–202
Stationarity of —— and of some nonnegative time series. Philippe Bougerol and Nico Picard. **52** (1992) 115–127
GARCH-M process • Measuring risk aversion from excess returns on a stock index. Ray Chou, Robert F. Engle, and Alex Kane. **52** (1992) 201–224
Gaussian and Student-t regression models • Bayes regression with autoregressive errors: A Gibbs sampling approach. Siddhartha Chib. **58** (1993) 275–294
Gaussian errors • Testing structural hypotheses in a multivariate cointegration analysis of the PPP and the UIP for UK. Soren Johansen and Katarina Juselius. **53** (1992) 211–244
Gaussian likelihood framework • Testing superexogeneity and invariance in regression models. Robert F. Engle and David F. Hendry. **56** (1993) 119–139
General autoregressive model • Autoregressive model • Stationarity of GARCH processes and of some nonnegative time series. Philippe Bougerol and Nico Picard. **52** (1992) 115–127
Generalized ARCH • Filtering and forecasting with misspecified ARCH models I: Getting the right variance with the wrong model. Daniel B. Nelson. **52** (1992) 61–90
Generated regressors problem • Calculating the (local) semiparametric efficiency bounds for the ——. Paul Rilstone. **56** (1993) 357–370
Generalized Durbin-Watson • Computing p-values for the —— and other invariant test statistics. Craig F. Ansley, Robert Kohn, and Thomas S. Shively. **54** (1992) 277–300
Generalized Hamilton model • Dynamic linear models with Markov-switching. Chang-Jin Kim. **60** (1994) 1–22
Generalized method of moments
Investment and Tobin's Q: Evidence from company panel data. Richard Blundell, Stephen Bond, Michael Devereux, and Fabio Schiantarelli. **51** (1992) 233–257
Orthogonality conditions for Tobit models with fixed effects and lagged dependent variables. Bo E. Honore. **59** (1993) 35–61
Simulation-based inference: A survey with special reference to panel data models. Christian Gourieroux and Alain Monfort. **59** (1993) 5–33
The potential for efficiency gains in estimation from the use of additional moment restrictions. Gordon C.R. Kemp. **53** (1992) 387–399
Generalized Theil-Tornqvist indices • An econometric approach to the construction of —— for multilateral comparisons. E.A. Selvanathan and D.S. Prasada Rao. **54** (1992) 335–346
GHM test • Monte Carlo results on several new and existing tests for the error component models. Badi H. Baltagi, Young-Jae Chang, and Qi Li. **54** (1992) 95–120
Gibbs sampling
Bayes inference in the Tobit censored regression model. Siddhartha Chib. **51** (1992) 79–99
Bayes regression with autoregressive errors: A —— approach. Siddhartha Chib. **58** (1993) 275–294
Global identification • How common is identification in parametric models? Douglas A. McManus. **53** (1992) 5–23
Global optimization of statistical functions with simulated annealing. William L. Goffe, Gary D. Ferrier, and John Rogers. **60** (1994) 65–99
GLS • A monotonic property for iterative —— in the two-way random effects model. Badi H. Baltagi and Qi Li. **53** (1992) 45–51
Goodness-of-fit • Minimum chi-square estimation and tests for model selection. Quang H. Vuong and Weiren Wang. **56** (1993) 141–168

Granger causality • Another look at the evidence on money-income causality. Benjamin M. Friedman and Kenneth N. Kuttner. **57** (1993) 189–203
Greene problem • A simplification of the Kopp-Diewert method of decomposing cost efficiency and some implications. Yaw M. Mensah. **60** (1994) 133–144
Grouping coarseness • More on —— in linear normal regression models. Steven B. Caudill. **52** (1992) 407–417
Growth rates • Bayesian and non-Bayesian methods for combining models and forecasts with applications to forecasting international ——. Chung-ki Min and Arnold Zellner. **56** (1993) 89–118

Hausman test • Testing for autocorrelation in the presence of lagged dependent variables: A specification error approach. Hashem Dezhbakhsh and Jerry G. Thursby. **60** (1994) 251–272
Hazard function framework • The impact of training on the frequency and duration of employment. R. Mark Gritz. **57** (1993) 21–51
Hazard models • Specification diagnostics for duration models: A martingale approach. Brian P. McCall. **60** (1994) 293–312
Hazards • Simultaneous equations for ——: Marriage duration and fertility timing. Lee A. Lillard. **56** (1993) 189–217
Hazards estimation • Semiparametric proportional —— of competing risks models with time-varying covariates. Glenn T. Sueyoshi. **51** (1992) 25–58
Hazards specification
A method for the analysis of the timing and magnitude of events in a continuous-time panel: The effects of British incomes policy, 1950–73. Masako Kurosawa and Stephen Pudney. **59** (1993) 161–185
Modelling inaccuracies in job-search duration data. Nicola Torelli and Ugo Trivellato. **59** (1993) 187–211
Heaping effects • Modelling inaccuracies in job-search duration data. Nicola Torelli and Ugo Trivellato. **59** (1993) 187–211
Hedonic price functions • Econometric issues of estimating ——: With an application to the U.S. market for automobiles. Nestor M. Arguea and Cheng Hsiao. **56** (1993) 243–267
Hermite polynomials • Some generalizations on the algebra of I(1) processes. Luigi Ermini and Clive W.J. Granger. **58** (1993) 369–384
Hessian matrix • A note on multiple roots of the Tobit log likelihood. Shigeru Iwata. **56** (1993) 441–446
Heterogeneity
A general framework for panel data models with an application to Canadian customer-dialed long distance telephone service. Cheng Hsiao, Trent W. Appelbe, and Christopher R. Dineen. **59** (1993) 63–86
Joint and separate score tests for state dependence and unobserved ——. Sanjiv Jaggia and Pravin K. Trivedi. **60** (1994) 273–291
Specification diagnostics for duration models: A martingale approach. Brian P. McCall. **60** (1994) 293–312
Heteroskedastic cointegration. Bruce E. Hansen. **54** (1992) 139–158
Heteroskedasticity
A comparison of several exact and approximate tests for structural shift under ——. Jerry G. Thursby. **53** (1992) 363–386
Local scale models: State space alternative to integrated GARCH processes. Neil Shephard. **60** (1994) 181–202
Prediction in dynamic models with time-dependent conditional variances. Richard T. Baillie and Tim Bollerslev. **52** (1992) 91–113
Quasi-Aitken estimation for —— of unknown form. John G. Cragg. . **54** (1992) 179–201
Robustness of size of tests of autocorrelation and —— to nonnormality. Merran Evans. **51** (1992) 7–24

Seemingly unrelated regressions under additive ——: Theory and share equation applications. David M. Mandy and Carlos Martins-Filho. **58** (1993) 315–346
Testing and estimating location vectors when the error covariance matrix is unknown. William Griffiths and George Judge. **54** (1992) 121–138
Unit root tests with conditional——. Kiwhan Kim and Peter Schmidt. **59** (1993) 287–300
Heteroskedasticity, conditional
Qualitative threshold ARCH models. Christian Gourieroux and Alain Monfort. **52** (1992) 159–199
Unobserved component time series models with ARCH disturbances. Andrew Harvey, Esther Ruiz, and Enrique Sentana. **52** (1992) 129–157
Homogeneity • Estimation of the error variance after a preliminary-test of—— in a regression model with spherically symmetric disturbances. Judith A. Giles. **53** (1992) 345–361
Hypotheses testing
Minimum chi-square estimation and tests for model selection. Quang H. Vuong and Weiren Wang. **56** (1993) 141–168
Testing superexogeneity and invariance in regression models. Robert F. Engle and David F. Hendry. **56** (1993) 119–139

I(1) *processes* • Some generalizations on the algebra of——. Luigi Ermini and Clive W.J. Granger. **58** (1993) 369–384
Identifiability, block • Tests of overidentification and predetermination in simultaneous equation models. T.W. Anderson and Naoto Kunitomo. **54** (1992) 49–78
Identifiability conditions • The identification of multivariate linear dynamic errors-in-variables models. Eugen Nowak. **59** (1993) 213–227
Identification
Asymptotic and finite sample distribution theory for IV estimators and tests in partially identified structural equations. In Choi and Peter C.B. Phillips. **51** (1992) 113–150
How common is——in parametric models? Douglas A. McManus. . **53** (1992) 5–23
Nonparametric——and estimation of polychotomous choice models. Rosa L. Matzkin. **58** (1993) 137–168
Identification and estimation of dynamic models with a time series of repeated cross sections. Robert Moffitt. **59** (1993) 99–123
Identification and estimation of noninvertible non-Gaussian MA(q) processes. James B. Ramsey and Alvaro Montenegro. **54** (1992) 301–320
Impulse responses • Misspecifications in vector autoregressions and their effects on—and variance decompositions. Phillip A. Braun and Stefan Mittnik. **59** (1993) 319–341
Income distribution • Maximum entropy Lorenz curves. Juhani Holm. . **59** (1993) 377–389
Index models
Efficiency bounds for some semiparametric selection models. Whitney K. Newey and James L. Powell. **58** (1993) 169–184
How sensitive are average derivatives? Wolfgang Hardle and A.B. Tsybakov. **58** (1993) 31–48
Semiparametric least squares (SLS) and weighted SLS estimation of single-——. Hidehiko Ichimura. **58** (1993) 71–120
Index options • Stock market volatility and the information content of stock——. Theodore E. Day and Craig M. Lewis. **52** (1992) 267–287
Index property • Semiparametric estimation of censored selection models with a nonparametric selection mechanism. Hyungtaik Ahn and James L. Powell. **58** (1993) 3–29
Index quantiles • Specification tests for binary choice models based on——. Roger W. Klein. **59** (1993) 343–375

Indirect translog utility function • Discrete/continuous models of consumer demand with binding nonnegativity constraints. Jeongwen Chiang and Lung-Fei Lee. **54** (1992) 79–93
Inference
Bayes —— in the Tobit censored regression model. Siddhartha Chib. . **51** (1992) 79–99
Co-integration and trend-stationarity in macroeconomic time series: Evidence from the likelihood function. David N. DeJong. **52** (1992) 347–370
Discussion: Forecasting time series with common seasonal patterns. John Geweke. **55** (1993) 201–202
Forecasting time series with common seasonal patterns. Fabio Canova. **55** (1993) 173–200
Maximum likelihood —— on cointegration and seasonal cointegration. Hahn Shik Lee. **54** (1992) 1–47
Properties of ordinary least squares estimators in regression models with nonspherical disturbances. Denzil G. Fiebig, Michael McAleer, and Robert Bartels. **54** (1992) 321–334
Quasi-Aitken estimation for heteroskedasticity of unknown form. John G. Cragg. **54** (1992) 179–201
Simulation-based ——: A survey with special reference to panel data models. Christian Gourieroux and Alain Monfort. **59** (1993) 5–33
Inference problems • Bayes regression with autoregressive errors: A Gibbs sampling approach. Siddhartha Chib. **58** (1993) 275–294
Inference theory • Heteroskedastic cointegration. Bruce E. Hansen. **54** (1992) 139–158
Information-efficiency • Maximum entropy estimation of density and regression functions. Hang K. Ryu. **56** (1993) 397–440
Initial observation variance assumption • Monte Carlo evidence on panel data regressions with AR(1) disturbances and an arbitrary variance on the initial observations. Badi H. Baltagi, Young-Jae Chang, and Qu Li. **52** (1992) 371–380
Instantaneous nonlinear transformations of stochastic processes • Some generalizations on the algebra of I(1) processes. Luigi Ermini and Clive W.J. Granger. **58** (1993) 369–384
Instrumental variables estimation in errors-in-variables models when instruments are correlated with errors. Shigeru Iwata. **53** (1992) 297–322
Instrumental variable estimators
Asymptotic and finite sample distribution theory for IV estimators and tests in partially identified structural equations. In Choi and Peter C.B. Phillips. **51** (1992) 113–150
Identification and estimation of dynamic models with a time series of repeated cross sections. Robert Moffitt. **59** (1993) 99–123
Testing for a unit root in time series using —— with pretest data based model selection. Alastair Hall. **54** (1992) 223–250
Testing for a unit root in time series using —— with pretest data based model selection (Vol. 54 (1992) pp. 223–250). Erratum. Alastair Hall. . . . . **60** (1994) 321.
Instrumental variables methods • Labour supply and intertemporal substitution. Richard Blundell, Costas Meghir, and Pedro Neves. **59** (1993) 137–160
Integrated processes, first-order • Some generalizations on the algebra of I(1) processes. Luigi Ermini and Clive W.J. Granger. **58** (1993) 369–384
Integrated time series models • Maximum likelihood estimation of stationary univariate fractionally ——. Fallaw Sowell. **53** (1992) 165–188
International growth rates • Bayesian and non-Bayesian methods for combining models and forecasts with applications to forecasting ——. Chung-ki Min and Arnold Zellner. **56** (1993) 89–118
Intertemporal substitution • Labour supply and ——. Richard Blundell, Costas Meghir, and Pedro Neves. **59** (1993) 137–160
Invariance • Testing superexogeneity and —— in regression models. Robert F. Engle and David F. Hendry. **56** (1993) 119–139

Invariant test statistics • Computing p-values for the generalized Durbin-Watson and other——. Craig F. Ansley, Robert Kohn, and Thomas S. Shively. **54** (1992) 277–300
Inventory behavior
Discussion: Induced seasonality and production-smoothing models of——. Alastair Hall. **55** (1993) 169–172
Induced seasonality and production-smoothing models of——. Spencer D. Krane. **55** (1993) 135–168
Inventory models
Discussion: The importance of seasonality in——. Jean-Marie Dufour. **55** (1993) 129–133
The importance of seasonality in——: Evidence from business survey data. Marc Nerlov, David Ross, and Douglas Willson. **55** (1993) 105–128
Investment and Tobin's Q: Evidence from company panel data. Richard Blundell, Stephen Bond, Michael Devereux, and Fabio Schiantarelli. **51** (1992) 233–257
Iterative GLS • A monotonic property for—— GLS in the two-way random effects model. Badi H. Baltagi and Qi Li. **53** (1992) 45–51
IV estimators • Asymptotic and finite sample distribution theory for——and tests in partially identified structural equations. In Choi and Peter C.B. Phillips. **51** (1992) 113–150

Jackknife approach • Quasi-Aitken estimation for heteroskedasticity of unknown form. John G. Cragg. **54** (1992) 179–201
James-Stein estimators • Confidence sets centered at——: A surprise concerning the unknown-variance case. J.T. Gene Hwang and Aman Ullah. **60** (1994) 145–156
Japanese consumption function
Discussion: Seasonal cointegration. Denise R. Osborn. **55** (1993) 299–303
Seasonal cointegration: The——. R.F. Engle, C.W.J. Granger, S. Hylleberg, and H.S. Lee. **55** (1993) 275–298
Japanese equity index • A comparison of risk-premium forecasts implied by parametric versus nonparametric conditional mean estimators. Thomas H. McCurdy and Thanasis Stengos. **52** (1992) 225–244
Job-search duration data • Modelling inaccuracies in——. Nicola Torelli and Ugo Trivellato. **59** (1993) 187–211
Joint distribution • Structural duration analysis of management data. Keunkwan Ryu. **57** (1993) 91–115

Kalman filter
Discussion: Dynamic linear models for time series components. David F. Findley. **55** (1993) 353–356
Dynamic linear models for time series components. Estela Bee Dagum and Benoit Quenneville. **55** (1993) 333–351
Unobserved component time series models with ARCH disturbances. Andrew Harvey, Esther Ruiz, and Enrique Sentana. **52** (1992) 129–157
Kernel estimation
Distribution theory for the analysis of binary choice under uncertainty with nonparametric estimation of expectations. Hyungtaik Ahn and Charles F. Manski. **56** (1993) 291–321
How sensitive are average derivatives? Wolfgang Hardle and A.B. Tsybakov. **58** (1993) 31–48
Nonparametric bootstrap confidence intervals for discrete regression functions. M.C. Rodriguz-Campos and R. Cao-Abad. **58** (1993) 207–222
Nonparametric evidence on asymmetry in business cycles using aggregate employment time series. Robert Hussey. **51** (1992) 217–231

Kernel regression • A comparison of risk-premium forecasts implied by parametric versus nonparametric conditional mean estimators. Thomas H. McCurdy and Thanasis Stengos. **52** (1992) 225–244
Kopp-Diewert method • A simplification of the —— method of decomposing cost efficiency and some implications. Yaw M. Mensah. . . . **60** (1994) 133–144
Kuhn-Tucker conditions • Discrete/continuous models of consumer demand with binding nonnegativity constraints. Jeongwen Chiang and Lung-Fei Lee. **54** (1992) 79–93
Kurtosis • Robustness to nonnormality of the Durbin-Watson test for autocorrelation. Mukhtar M. Ali and Subhash C. Sharma. **57** (1993) 117–136

Labor force participation • Specification tests for binary choice models based on index quantiles. Roger W. Klein. **59** (1993) 343–375
Labour supply and intertemporal substitution. Richard Blundell, Costas Meghir, and Pedro Neves. **59** (1993) 137–160
Labor supply data • Semiparametric estimation of censored selection models with a nonparametric selection mechanism. Hyungtaik Ahn and James L. Powell. **58** (1993) 3–29
Lagged dependent variables
Orthogonality conditions for Tobit models with fixed effects and ——. Bo E. Honore. **59** (1993) 35–61
Testing for autocorrelation in the presence of ——: A specification error approach. Hashem Dezhbakhsh and Jerry G. Thursby. . . **60** (1994) 251–272
Lagrange multiplier test
Monte Carlo results on several new and existing tests for the error component models. Badi H. Baltagi, Young-Jae Chang, and Qu Li. **54** (1992) 95–120
Nonnested testing for autocorrelation in the linear regression model. Paramsothy Silvapulle and Maxwell L. King. **58** (1993) 295–314
Testing for neglected nonlinearity in time series models: A comparison of neural network methods and alternative tests. Tae-Hwy Lee, Halbert White, and Clive W.J. Granger. **56** (1993) 269–290
Testing the null hypothesis of stationarity against the alternative of a unit root: How sure are we that economic time series have a unit root? Denis Kwiatkowski, Peter C.B. Phillips, Peter Schmidt, and Yongcheol Shin. **54** (1992) 159–178
Tests of overidentification and predetermination in simultaneous equation models. T.W. Anderson and Naoto Kunitomo. **54** (1992) 49–78
Laplacian approximations • Bayes inference in the Tobit censored regression model. Siddhartha Chib. **51** (1992) 79–99
Large sample distribution • Specification tests for binary choice models based on index quantiles. Roger W. Klein. **59** (1993) 343–375
Latent factor model • Unobserved component time series models with ARCH disturbances. Andrew Harvey, Esther Ruiz, and Enrique Sentana. **52** (1992) 129–157
Leading case • Exact densities for variance estimators of the structural disturbances in simultaneous equations models. Murray D. Smith. **60** (1994) 157–180
Least absolute deviations estimator • Some aspects of measurement error in a censored regression model. Andrew A. Weiss. **56** (1993) 169–188
Least squares estimation
Efficient estimation and testing of cointegrating vectors in the presence of deterministic trends. Bruce E. Hansen. **53** (1992) 87–121
Heteroskedastic cointegration. Bruce E. Hansen. **54** (1992) 139–158
Least squares estimator • Modified three-stage —— which is third-order efficient. Kimio Morimune and Shinichi Sakata. **57** (1993) 257–276

Least squares regression • Regression-based methods for using control variables in Monte Carlo experiments. Russell Davidson and James G. MacKinnon. **54** (1992) 203–222
Likelihood function • Co-integration and trend-stationarity in macroeconomic time series: Evidence from the ——. David N. DeJong. . **52** (1992) 347–370
Likelihood inference • Maximum —— cointegration and seasonal cointegration. Hahn Shik Lee. **54** (1992) 1–47
Likelihood ratio test(s)
Testing structural hypotheses in a multivariate cointegration analysis of the PPP and the UIP for UK. Soren Johansen and Katarina Juselius. **53** (1992) 211–244
Tests of overidentification and predetermination in simultaneous equation models. T.W. Anderson and Naoto Kunitomo. **54** (1992) 49–78
Limited and qualitative dependent variable models • A pseudo-R-squared measure for ——. Thomas Laitila. **56** (1993) 341–356
Limited-dependent rational expectations models • Estimating —— with an application to exchange rate determination in a target zone. M. Hashem Pesaran and Hossein Samiei. **53** (1992) 141–163
Limited dependent variable models
On the computation of semiparametric estimates in ——. C.A.P. Pinkse. **58** (1993) 185–205
Smooth unbiased multivariate probability simulators for maximum likelihood estimation of ——. Axel Borsch-Supan and Vassilis A. Hajivassiliou. **58** (1993) 347–368
Limiting distribution theory • Testing for a unit root by frequency domain regression. In Choi and Peter C.B. Phillips. **59** (1993) 263–286
Limiting distributions • Higher-order sample autocorrelations and the unit root hypothesis. Herman J. Bierens. **57** (1993) 137–160
Linear dynamic errors-in-variables models • The identification of multivariate ——. Eugen Nowak. **59** (1993) 213–227
Linear fixed effects models • Minimum MSE estimation of a regression model with fixed effects from a series of cross-sections. Marno Verbeek and Theo Nijman. **59** (1993) 125–136
Linear models
Discussion: Dynamic —— for time series components. David F. Findley. **55** (1993) 353–356
Dynamic —— for time series components. Estela Bee Dagum and Benoit Quenneville. **55** (1993) 333–351
Linear normal regression models • More on grouping coarseness in ——. Steven B. Caudill. **52** (1992) 407–417
Linear panel data models
A general framework for panel data models with an application to Canadian customer-dialed long distance telephone service. Cheng Hsiao, Trent W. Appelbe, and Christopher R. Dineen. **59** (1993) 63–86
On the testing of correlated effects with panel data. Manuel Arellano. **59** (1993) 87–97
Linear rational expectations models • Saddlepath solutions for multivariate ——. Michael K. Salemi and Jaeyeong Song. **53** (1992) 245–269
Linear regression • On the finite sample behavior of adaptive estimators. Douglas G. Steigerwald. **54** (1992) 371–400
Linear regression model • Nonnested testing for autocorrelation in the ——. Paramsothy Silvapulle and Maxwell L. King. **58** (1993) 295–314
Linear restrictions
Pre-testing for —— in a regression model with spherically symmetric disturbances (50 (1991) 377–398). Errata. Judith A. Giles. **58** (1993) 403
Testing —— on coefficients in a linear regression model with proxy variables and spherically symmetric disturbances. Kazuhiro Ohtani and Judith Giles. **57** (1993) 393–406

Linear systems theory • A Bayesian approach to state space multivariate time series modeling. Jeffrey H. Dorfman and Arthur M. Havenner. **52** (1992) 315–346
Linear trends • Stochastic——: Models and estimators. Agustin Maravall. **56** (1993) 5–37
Local alternatives procedures • A comparison of nonnested tests for misspecified models using the method of approximate slopes. Jeffrey E. Zabel. **57** (1993) 205–232
Local identification • How common is identification in parametric models? Douglas A. McManus. **53** (1992) 5–23
Local power properties • Testing for a unit root in time series using instrumental variable estimators with pretest data based model selection. Alastair Hall. **54** (1992) 223–250
Local scale models: State space alternative to integrated GARCH processes. Neil Shephard. **60** (1994) 181–202
Locally most powerful invariant test • Testing for autoregressive disturbances in a time series regression with missing observations. Thomas S. Shively. **57** (1993) 233–255
Location vectors • Testing and estimating —— when the error covariance matrix is unknown. William Griffiths and George Judge. **54** (1992) 121–138
Log likelihood • A note on multiple roots of the Tobit ——. Shigeru Iwata. **56** (1993) 441–446
Logit models • Bayesian analysis of —— using natural conjugate priors. Gary Koop and Dale J. Poirier. **56** (1993) 323–340
Long-run equilibrium relationships • Five alternative methods of estimating ——. Jesus Gonzalo. **60** (1994) 203–233
Long-run parameters • Estimating long-run relationships in economics: A comparison of different approaches. Brett Inder. **57** (1993) 53–68
Lorenz curves • Maximum entropy ——. Juhani Holm. **59** (1993) 377–389
Lucas critique • Testing superexogeneity and invariance in regression models. Robert F. Engle and David F. Hendry. **56** (1993) 119–139

Macroeconomic time series • Co-integration and trend-stationarity in ——: Evidence from the likelihood function. David N. DeJong. . . . **52** (1992) 347–370
Management data • Structural duration analysis of ——. Keunkwan Ryu. **57** (1993) 91–115
MA(q) processes • Identification and estimation of noninvertible non-Gaussian ——. James B. Ramsey and Alvaro Montenegro. . . . **54** (1992) 301–320
Markov chains theory • Qualitative threshold ARCH models. Christian Gourieroux and Alain Monfort. **52** (1992) 159–199
Markov process • Identification and estimation of dynamic models with a time series of repeated cross sections. Robert Moffitt. **59** (1993) 99–123
Markov-switching • Dynamic linear models with ——. Chang-Jin Kim. . **60** (1994) 1–22
Market demand • Econometric issues of estimating hedonic price functions: With an application to the U.S. market for automobiles. Nestor M. Arguea and Cheng Hsiao. **56** (1993) 243–267
Marriage duration • Simultaneous equations for hazards: —— and fertility timing. Lee A. Lillard. **56** (1993) 189–217
Martingale approach • Specification diagnostics for duration models: A ——. Brian P. McCall. **60** (1994) 293–312
Martingale hypothesis • Time series properties of aggregate output fluctuations. Steven N. Durlauf. **56** (1993) 39–56
Maximum entropy estimation of density and regression functions. Hang K. Ryu. **56** (1993) 397–440
Maximum entropy Lorenz curves. Juhani Holm. **59** (1993) 377–389
Maximum likelihood
Cointegration in partial systems and the efficiency of single-equation analysis. Soren Johansen. **52** (1992) 389–402

Seasonality and approximation errors in rational expectations models. Lars Peter Hansen and Thomas J. Sargent. **55** (1993) 21–55
Simulation-based inference: A survey with special reference to panel data models. Christian Gourieroux and Alain Monfort. **59** (1993) 5–33
Maximum likelihood estimation
Simultaneous equations for hazards: Marriage duration and fertility timing. Lee A. Lillard. **56** (1993) 189–217
Smooth unbiased multivariate probability simulators for —— of limited dependent variable models. Axel Borsch-Supan and Vassilis A. Hajivassiliou. **58** (1993) 347–368
Maximum likelihood estimation of stationary univariate fractionally integrated time series models. Fallaw Sowell. **53** (1992) 165–188

Maximum likelihood estimators
Five alternative methods of estimating long-run equilibrium relationships. Jesus Gonzalo. **60** (1994) 203–1233
Making noisy data sing: Estimating production technologies in developing countries. James R. Tybout. **53** (1992) 25–44
Maximum likelihood inference on cointegration and seasonal cointegration. Hahn Shik Lee. **54** (1992) 1–47
Maximum score estimate • On the computation of semiparametric estimates in limited dependent variable models. C.A.P. Pinkse. ... **58** (1993) 185–205
Mean squared error estimation • Minimum —— of a regression model with fixed effects from a series of cross-sections. Marno Verbeek and Theo Nijman. **59** (1993) 125–136
Measurement error(s)
Making noisy data sing: Estimating production technologies in developing countries. James R. Tybout. **53** (1992) 25–44
Some aspects of —— in a censored regression model. Andrew A. Weiss. **56** (1993) 169–188
The identification of multivariate linear dynamic errors-in-variables models. Eugen Nowak. **59** (1993) 213–227
Measurement error models • Semiparametric quasilikelihood and variance function estimation in ——. J.H. Sepanski and R.J. Carroll. ... **58** (1993) 223–256
Median regression for ordered discrete response. Myoung-jae Lee. ... **51** (1992) 59–77
Method of moments estimator • Investment and Tobin's Q: Evidence from company panel data. Richard Blundell, Stephen Bond, Michael Devereux, and Fabio Schiantarelli. **51** (1992) 233–257
Michigan Panel Study of Income Dynamics • Exogeneity tests in a truncated structural equation. Hiroki Tsurumi and Peter Mehr. **56** (1993) 371–396
Minimum chi-square estimation and tests for model selection. Quang H. Vuong and Weiren Wang. **56** (1993) 141–168
Missing data
Making noisy data sing: Estimating production technologies in developing countries. James R. Tybout. **53** (1992) 25–44
Testing for autoregressive disturbances in a time series regression with ——. Thomas S. Shively. **57** (1993) 233–255
Misspecification
Finite sample evidence on the performance of stochastic frontiers and data envelopment analysis using panel data. Byeong-Ho Gong and Robin C. Sickles. **51** (1992) 259–284
On the testing of correlated effects with panel data. Manuel Arellano. **59** (1993) 87–97
Qualitative threshold ARCH models. Christian Gourieroux and Alain Monfort. **52** (1992) 159–199
Quasi-Aitken estimation for heteroskedasticity of unknown form. John G. Cragg. **54** (1992) 179–201

Misspecifications in vector autoregressions and their effects on impulse responses and variance decompositions. Phillip A. Braun and Stefan Mittnik. **59** (1993) 319–341
Misspecified ARCH models • Filtering and forecasting with —— I: Getting the right variance with the wrong model. Daniel B. Nelson. . . . **52** (1992) 61–90
Misspecified models • A comparison of nonnested tests for —— using the method of approximate slopes. Jeffrey E. Zabel. **57** (1993) 205–232
Mixing conditions • Higher-order sample autocorrelations and the unit root hypothesis. Herman J. Bierens. **57** (1993) 137–160
Mode regression • Quadratic ——. Myoung-jae Lee. **57** (1993) 1–19
Model-based approach • Stochastic linear trends: Models and estimators. Agustin Maravall. **56** (1993) 5–37
Model selection
Minimum chi-square estimation and tests for ——. Quang H. Vuong and Weiren Wang. **56** (1993) 141–168
Testing for a unit root in time series using instrumental variable estimators with pretest data based ——. Alastair Hall. **54** (1992) 223–250
Testing superexogeneity and invariance in regression models. Robert F. Engle and David F. Hendry. **56** (1993) 119–139
Model specifications • A Bayesian approach to state space multivariate time series modeling. Jeffrey H. Dorfman and Arthur M. Havenner. **52** (1992) 315–346
Moment restrictions • The potential for efficiency gains in estimation from the use of additional ——. Gordon C.R. Kemp. **53** (1992) 387–399
Monetary aggregate • A revealed preference test for weakly separable utility maximization with incomplete adjustment. James L. Swofford and Gerald A. Whitney. **60** (1994) 235–249
Money-income causality • Another look at the evidence on ——. Benjamin M. Friedman and Kenneth N. Kuttner. **57** (1993) 189–203
Money-output causality • The impact of stochastic and deterministic trends on ——: A multi-country investigation (45 (1990) 291–308). Errata. Robert Krol and Lee E. Ohanian. **58** (1993) 405
Monotonic property • A —— for iterative GLS in the two-way random effects model (with Badi H. Baltagi). **53** (1992) 45–51
Monte Carlo comparisons • Robustness of size of tests of autocorrelation and heteroscedasticity to nonnormality. Merran Evans. **51** (1992) 7–24
Monte Carlo evidence on panel data regressions with AR(1) disturbances and an arbitrary variance on the initial observations. Badi H. Baltagi, Young-Jae Chang, and Qi Li. **52** (1992) 371–380
Monte Carlo experiment(s)
A comparison of several exact and approximate tests for structural shift under heteroscedasticity. Jerry G. Thursby. **53** (1992) 363–386
A comparison of nonnested tests for misspecified models using the method of approximate slopes. Jeffrey E. Zabel. **57** (1993) 205–232
Discussion: The effect of seasonal adjustment filters on tests for a unit root. Francis X. Diebold. **55** (1993) 99–103
Estimating limited-dependent rational Expectations models with an application to exchange rate determination in a target zone. M. Hashem Pesaran and Hossein Samiei. **53** (1992) 141–163
Estimation and testing in the random effects probit model. David K. Guilkey and James L. Murphy. **59** (1993) 301–317
Estimation of polynomial distributed lags and leads with end point constraints. Donald W.K. Andrews and Ray C. Fair. **53** (1992) 123–139
Joint and separate score tests for state dependence and unobserved heterogeneity. Sanjiv Jaggia and Pravin K. Trivedi. **60** (1994) 273–291
Maximum entropy estimation of density and regression functions. Hang K. Ryu. **56** (1993) 397–440

Nonnested testing for autocorrelation in the linear regression model. Paramsothy Silvapulle and Maxwell L. King. **58** (1993) 295–314
On the finite sample behavior of adaptive estimators. Douglas G. Steigerwald. **54** (1992) 371–400
Orthogonality conditions for Tobit models with fixed effects and lagged dependent variables. Bo E. Honore. **59** (1993) 35–61
Overdispersion tests for truncated Poisson regression models. Shiferaw Gurmu and Pravin K. Trivedi. **54** (1992) 347–370
Regression-based methods for using control variables in——. Russell Davidson and James G. MacKinnon. **54** (1992) 203–222
Saddlepath solutions for multivariate linear rational expectations hmodels. Michael K. Salemi and Jaeyeong Song. **53** (1992) 245–269
The effect of seasonal adjustment filters on tests for a unit root. Eric Ghysels and Pierre Perron. **55** (1993) 57–98
Unobserved component time series models with ARCH disturbances. Andrew Harvey, Esther Ruiz, and Enrique Sentana. **52** (1992) 129–157
Monte Carlo integration • Bayes inference in the Tobit censored regression model. Siddhartha Chib. **51** (1992) 79–99
Monte Carlo methods
Discussion: Seasonal unit roots in aggregate U.S. data. David A. Dickey. **55** (1993) 329–331
Seasonal unit roots in aggregate U.S. data. J. Joseph Beaulieu and Jeffrey A. Miron. **55** (1993) 305–328
The power problems of unit root tests in time series with autoregressive errors. David N. Dejong, John C. Nankervis, N.E. Savin, and Charles H. Whiteman. **53** (1992) 323–343
Monte Carlo results
A simple multiple variance ratio test. K. Victor Chow and Karen C. Denning. **58** (1993) 385–401
Smooth unbiased multivariate probability simulators for maximum likelihood estimation of limited dependent variable models. Axel Borsch-Supan and Vassilis A. Hajivassiliou. **58** (1993) 347–368
Monte Carlo results on several new and existing tests for the error component models. Badi H. Baltagi, Young-Jae Chang, and Qi Li. . . . **54** (1992) 95–120
Monte Carlo results on several new and existing tests for the error component model (Vol. 54, No. 1–3 (1992) pp. 95–120). Erratum. Badi H. Baltagi, Young-Jae Chang, and Qi Li. **59** (1993) 405
Monte Carlo simulations
Discussion: Seasonal cointegration. Denise R. Osborn. **55** (1993) 299–303
Identification and estimation of noninvertible non-Gaussian MA(q) processes. James B. Ramsey and Alvaro Montenegro. **54** (1992) 301–320
Maximum likelihood inference on cointegration and seasonal cointegration. Hahn Shik Lee. **54** (1992) 1–47
Seasonal cointegration: The Japanese consumption function. R.F. Engle, C.W.J. Granger, S. Hylleberg, and H.S. Lee. **55** (1993) 275–298
Semiparametric proportional hazards estimation of competing risks models with time-varying covariates. Glenn T. Sueyoshi. **51** (1992) 25–58
Structural duration analysis of management data. Keunkwan Ryu. . **57** (1993) 91–115
Testing for a unit root by frequency domain regression. In Choi and Peter C.B. Phillips. **59** (1993) 263–286
Monte Carlo study
Adaptive estimation in time series regression models. Douglas G. Steigerwald. **54** (1992) 251–275
Estimating long-run relationships in economics: A comparison of different approaches. Brett Inder. **57** (1993) 53–68
Minimum chi-square estimation and tests for model selection. Quang H. Vuong and Weiren Wang. **56** (1993) 141–168

Modelling inaccuracies in job-search duration data. Nicola Torelli and Ugo Trivellato. **59** (1993) 187–211
Quadratic mode regression. Myoung-jae Lee. **57** (1993) 1–19
Testing for autocorrelation in the presence of lagged dependent variables: A specification error approach. Hashem Dezhbakhsh and Jerry G. Thursby. **60** (1994) 251–272
Testing for neglected nonlinearity in time series models: A comparison of neural network methods and alternative tests. Tae-Hwy Lee, Halbert White, and Clive W.J. Granger. **56** (1993) 269–290
Monte Carlo techniques • Finite sample evidence on the performance of stochastic frontiers and data envelopment analysis using panel data. Byeong-Ho Gong and Robin C. Sickles. **51** (1992) 259–284
Morrison's measure of capacity utilization: A critique. James H. Hauver and Jet Yee. **52** (1992) 403–406
Multidimensional integration problems • Smooth unbiased multivariate probability simulators for maximum likelihood estimation of limited dependent variable models. Axel Borsch-Supan and Vassilis A. Hajivassiliou. **58** (1993) 347–368
Multi-dynamic-factor model • A —— for stock returns. Victor Ng, Robert F. Engle, and Michael Rothschild. **52** (1992) 245–266
Multilateral comparisons • An econometric approach to the construction of generalized Theil-Tornqvist indices for ——. E.A. Selvanathan and D.S. Prasada Rao. **54** (1992) 335–346
Multiple roots • A note on —— of the Tobit log likelihood. Shigeru Iwata. . . . . **56** (1993)441–446
Multiple variance ratio test • A simple ——. K. Victor Chow and Karen C. Denning. **58** (1993) 385–401
Multisectoral model • Persistence, cointegration, and aggregation: A disaggregated analysis of output fluctuations in the U.S. economy. M.H. Pesaran, R.G. Pierse and K.C. Lee. **56** (1993) 57–88
Multistep predictors • Prediction in dynamic models with time-dependent conditional variances. Richard T. Baillie and Tim Bollerslev. . . **52** (1992) 91–113
Multivariate cointegration analysis • Testing structural hypotheses in a —— of the PPP and the UIP for UK. Soren Johansen and Katarina Juselius. **53** (1992) 211–244
Multivariate linear dynamic error-in-variables models • The identification of ——. Eugen Nowak. **59** (1993) 213–227
Multivariate linear rational expectations models • Saddlepath solutions for ——. Michael K. Salemi and Jaeyeong Song. **53** (1992) 245–269
Multivariate probability simulators • Smooth unbiased —— for maximum likelihood estimation of limited dependent variable models. Axel Borsch-Supan and Vassilis A. Hajivassiliou. **58** (1993) 347–368
Multivariate time series modeling • A Bayesian approach to state space ——. Jeffrey H. Dorfman and Arthur M. Havenner. . . . **52** (1992) 315–346

National Longitudinal Survey • The impact of training on the frequency and duration of employment. R. Mark Gritz. **57** (1993) 21–51
Natural conjugate priors • Bayesian analysis of logit models using ——. Gary Koop and Dale J. Poirier. **56** (1993) 323–340
Nelson-Plosser data • Testing the null hypothesis of stationarity against the alternative of a unit root: How sure are we that economic time series have a unit root? Denis Kwiatkowski, Peter C.B. Phillips, Peter Schmidt, and Yongcheol Shin. **54** (1992) 159–178
Network methods • Testing for neglected nonlinearity in time series models: A comparison of neural —— and alternative tests. Tae-Hwy Lee, Halbert White, and Clive W.J. Granger. **56** (1993) 269–290

Neural network methods • Testing for neglected nonlinearity in time series models: A comparison of —— and alternative tests. Tae-Hwy Lee, Halbert White, and Clive W.J. Granger. **56** (1993) 269–290
Neural-network transformation • Some generalizations on the algebra of I(1) processes. Luigi Ermini and Clive W.J. Granger. **58** (1993) 369–384
Noninvertible non-Gaussian MA(q) processes • Identification and estimation of ——. James B. Ramsey and Alvaro Montenegro. **54** (1992) 301–320
Non-Gaussian MA(q) processes • Identification and estimation of noninvertible ——. James B. Ramsey and Alvaro Montenegro. **54** (1992) 301–320
Nonlinearity • Testing for neglected —— in time series models: A comparison of neural network methods and alternative tests. Tae-Hwy Lee, Halbert White, and Clive W.J. Granger. **56** (1993) 269–290
Nonnegative time series • Stationarity of GARCH processes and of some ——. Philippe Bougerol and Nico Picard. **52** (1992) 115–127
Nonnegativity constraints • Discrete/continuous models of consumer demand with binding ——. Jeongwen Chiang and Lung-Fei Lee. **54** (1992) 79–93
Nonnested approach • A —— to testing continuous time models against discrete alternatives. Marcus J. Chambers. **57** (1993) 319–343
Nonnested models • A simulation approach to the problem of computing Cox's statistic for testing ——. M. Hashem Pesaran and Bahram Pesaran. **57** (1993) 377–392
Nonnested testing for autocorrelation in the linear regression model. Paramsothy Silvapulle and Maxwell L. King. **58** (1993) 295–314
Nonnested tests • A comparison of —— for misspecified models using the method of approximate slopes. Jeffrey E. Zabel. **57** (1993) 205–232
Nonnormality
Robustness of size of tests of autocorrelation and heteroscedasticity to ——. Merran Evans. **51** (1992) 7–24
Robustness to —— of the Durbin-Watson test for autocorrelation. Mukhtar M. Ali and Subhash C. Sharma. **57** (1993) 117–136
Nonparametric and semiparametric approaches to discrete response analysis. Edited by Wolfgang Hardle and Charles F. Manski. **58** (1993) 1–274
Nonparametric and semiparametric approaches to discrete response analysis • Editors' introduction. Wolfgang Hardle and Charles F. Manski. **58** (1993) 1–2
Nonparametric bootstrap confidence intervals for discrete regression functions. M.C. Rodriguz-Campos and R. Cao-Abad. **58** (1993) 207–222
Nonparametric estimation • Distribution theory for the analysis of binary choice under uncertainty with —— of expectations. Hyungtaik Ahn and Charles F. Manski. **56** (1993) 291–321
Nonparametric evidence on asymmetry in business cycles using aggregate employment time series. Robert Hussey. **51** (1992) 217–231
Nonparametric identification and estimation of polychotomous choice models. Rosa L. Matzkin. **58** (1993) 137–168
Nonparametric polychotomous choice models
Semiparametric estimation of a work-trip mode choice model. Joel L. Horowitz. **58** (1993) 49–70
Some efficiency bounds for semiparametric discrete choice models. T. Scott Thompson. **58** (1993) 257–274
Nonparametric regression
Dynamic choice in social settings: Learning from the experiences of others. Charles F. Manski. **58** (1993) 121–136
Semiparametric quasilikelihood and variance function estimation in measurement error models. J.H. Sepanski and R.J. Carroll. ... **58** (1993) 223–256
Nonparametric selection mechanism • Semiparametric estimation of censored selection models with a ——. Hyungtaik Ahn and James L. Powell. **58** (1993) 3–29

Nonparametric testing * A revealed preference test for weakly separable utility maximization with incomplete adjustment. James L. Swofford and Gerald A. Whitney. **60** (1994) 235–249
Nonrandom samples * Selectivity bias correction methods in polychotomous sample selection models. Carl P. Schmertmann. . . . **60** (1994) 101–132
Nonspherical disturbances * Properties of ordinary least squares estimators in regression models with ——. Denzil G. Fiebig, Michael McAleer, and Robert Bartels. **54** (1992) 321–334
Nonstationary variances * Heteroskedastic cointegration. Bruce E. Hansen. **54** (1992) 139–158
Normal regression models * More on grouping coarseness in linear ——. Steven B. Caudill. **52** (1992) 407–417
Normality * Robustness of size of tests of autocorrelation and heteroscedasticity to non ——. Merran Evans. **51** (1992) 7–24
Null hypothesis of stationarity * Testing the —— against the alternative of a unit root: How sure are we that economic time series have a unit root? Denis Kwiatkowski, Peter C.B. Phillips, Peter Schmidt, and Yongcheol Shin. **54** (1992) 159–178
Numerical optimization algorithms * On the computation of semiparametric estimates in limited dependent variable models. C.A.P. Pinkse. **58** (1993) 185–205
Nuclear power industry * Structural duration analysis of management data. Keunkwan Ryu. **57** (1993) 91–115

OLS estimator * Estimating long-run relationships in economics: A comparison of different approaches. Brett Inder. **57** (1993) 53–68
Optimal choice * The —— of controls and pre-experimental observations. Theo Nijman and Marno Verbeek. **51** (1992) 183–189
Optimal experimental design * The optimal choice of controls and pre-experimental observations. Theo Nijman and Marno Verbeek. . **51** (1992) 183–189
Optimal forecasting * A Bayesian approach to state space multivariate time series modeling. Jeffrey H. Dorfman and Arthur M. Havenner. **52** (1992) 315–346
Optimal smoothing parameter * How sensitive are average derivatives? Wolfgang Hardle and A.B. Tsybakov. **58** (1993) 31–48
Optimization algorithms * On the computation of semiparametric estimates in limited dependent variable models. C.A.P. Pinkse. **58** (1993) 185–205
Optimization behavior
Econometric issues of estimating hedonic price functions: With an application to the U.S. market for automobiles. Nestor M. Arguea and Cheng Hsiao. **56** (1993) 243–267
Experimental estimates of the impact of wage subsidies. Jeffrey A. Dubin and Douglas Rivers. **56** (1993) 219–242
Structural duration analysis of management data. Keunkwan Ryu. **57** (1993) 91–115
Options markets * Stock market volatility and the information content of stock index options. Theodore E. Day and Craig M. Lewis. . . . **52** (1992) 267–287
Options prices * Implied ARCH models from ——. Robert F. Engle and Chowdhury Mustafa. **52** (1992) 289–311
Ordered discrete response * Median regression for ——. Myoung-jae Lee. **51** (1992) 59–77
Ordinary least squares estimators * Properties of —— in regression models with nonspherical disturbances. Denzil G. Fiebig, Michael McAleer, and Robert Bartels. **54** (1992) 321–334
Orthogonal deviations transformation * On the testing of correlated effects with panel data. Manuel Arellano. **59** (1993) 87–97
Orthogonality conditions for Tobit models with fixed effects and lagged dependent variables. Bo E. Honore. **59** (1993) 35–61

Out-of-sample forecasts
A comparison of risk-premium forecasts implied by parametric versus nonparametric conditional mean estimators. Thomas H. McCurdy and Thanasis Stengos. **52** (1992) 225–244
Stock market volatility and the information content of stock index options. Theodore E. Day and Craig M. Lewis. **52** (1992) 267–287
Output fluctuations
Persistence, cointegration, and aggregation: A disaggregated analysis of ——in the U.S. economy. M.H. Pesaran, R.G. Pierse and K.C. Lee. **56** (1993) 57–88
Time series properties of aggregate——. Steven N. Durlauf. **56** (1993) 39–56
Overdispersion tests for truncated Poisson regression models. Shiferaw Gurmu and Pravin K. Trivedi. **54** (1992) 347–370
Overidentification • Tests of——and predetermination in simultaneous equation models. T.W. Anderson and Naoto Kunitomo. **54** (1992) 49–78

p-values
Computing——for the generalized Durbin-Watson and other invariant test statistics. Craig F. Ansley, Robert Kohn, and Thomas S. Shively. **54** (1992) 277–300
Testing for autoregressive disturbances in a time series regression with missing observations. Thomas S. Shively. **57** (1993) 233–255
Panel data
Finite sample evidence on the performance of stochastic frontiers and data envelopment analysis using——. Byeong-Ho Gong and Robin C. Sickles. **51** (1992) 259–284
Investment and Tobin's Q: Evidence from company ——. Richard Blundell, Stephen Bond, Michael Devereux, and Fabio Schiantarelli. **51** (1992) 233–257
Measuring technical efficiency with——: A dual approach. Scott E. Atkinson and Christopher Cornwell. **59** (1993) 257–261
On the testing of correlated effects with——. Manuel Arellano. . . **59** (1993) 87–97
Orthogonality conditions for Tobit models with fixed effects and lagged dependent variables. Bo E. Honore. **59** (1993) 35–61
Simultaneous equations and——. Christopher Cornwell, Peter Schmidt, and Donald Wyhowski. **51** (1992) 151–181
The optimal choice of controls and pre-experimental observations. Theo Nijman and Marno Verbeek. **51** (1992) 183–189
Panel data models
A general framework for—— with an application to Canadian customer-dialed long distance telephone service. Cheng Hsiao, Trent W. Appelbe, and Christopher R. Dineen. **59** (1993) 63–86
Simulation-based inference: A survey with special reference to——. Christian Gourieroux and Alain Monfort. **59** (1993) 5–33
Panel data regressions • Monte Carlo evidence on —— with AR(1) disturbances and an arbitrary variance on the initial observations. Badi H. Baltagi, Young-Jae Chang, and Qi Li. **52** (1992) 371–380
Panels
Editors' introduction. The econometrics of—— and pseudo panels. Carlo Carraro, Franco Peracchi, and Guglielmo Weber. **59** (1993) 1–4
The econometrics of——and pseudo panels. Edited by Carlo Carraro, Franco Peracchi, and Guglielmo Weber. **59** (1993) 1–211
Pantula-Hall unit root tests • Testing for a unit root in time series using instrumental variable estimators with pretest data based model selection. Alastair Hall. **54** (1992) 223–250
Parameter constancy
Bayesian and non-Bayesian methods for combining models and forecasts with applications to forecasting international growth rates. Chung-ki Min and Arnold Zellner. **56** (1993) 89–118

Testing superexogeneity and invariance in regression models. Robert F. Engle and David F. Hendry. **56** (1993) 119–139
Parametric and semiparametric models • Tests of specification for——. Yoon-Jae Whang and Donald W.K. Andrews. **57** (1993) 277–318
Parametric models • How common is identification in——? Douglas A. McManus. **53** (1992) 5–23
Parametric versus nonparametric conditional mean estimators • A comparison of risk-premium forecasts implied by——. Thomas H. McCurdy and Thanasis Stengos. **52** (1992) 225–244
Partial systems • Cointegration in—— and the efficiency of single-equation analysis. Soren Johansen. **52** (1992) 389–402
Partially identified structural equations • Asymptotic and finite sample distribution theory for IV estimators and tests in——. In Choi and Peter C.B. Phillips. **51** (1992) 113–150
Pearson chi-square type statistics • Minimum chi-square estimation and tests for model selection. Quang H. Vuong and Weiren Wang. . **56** (1993) 141–168
Periodic transformation • Some generalizations on the algebra of I(1) processes. Luigi Ermini and Clive W.J. Granger. **58** (1993) 369–384
Persistence
Implied ARCH models from options prices. Robert F. Engle and Chowdhury Mustafa. **52** (1992) 289–311
Time series properties of aggregate output fluctuations. Steven N. Durlauf. **56** (1993) 39–56
Persistence, cointegration, and aggregation: A disaggregated analysis of output fluctuations in the U.S. economy. M.H. Pesaran, R.G. Pierse and K.C. Lee. **56** (1993) 57–88
Point-optimal invariant tests
Nonnested testing for autocorrelation in the linear regression model. Paramsothy Silvapulle and Maxwell L. King. **58** (1993) 295–314
Testing for autoregressive disturbances in a time series regression with missing observations. Thomas S. Shively. **57** (1993) 233–255
Point-optimal tests • Alternative——for regression coefficient stability. Robert D. Brooks. **57** (1993) 365–376
Poisson regression models • Overdispersion tests for truncated——. Shiferaw Gurmu and Pravin K. Trivedi. **54** (1992) 347–370
Polychotomous choice models
Nonparametric identification and estimation of——. Rosa L. Matzkin. **58** (1993) 137–168
On the computation of semiparametric estimates in limited dependent variable models. C.A.P. Pinkse. **58** (1993) 185–205
Selectivity bias correction methods in polychotomous sample selection models. Carl P. Schmertmann. **60** (1994) 101–132
Semiparametric estimation of a work-trip mode choice model. Joel L. Horowitz. **58** (1993) 49–70
Some efficiency bounds for semiparametric discrete choice models. T. Scott Thompson. **58** (1993) 257–274
Polynomial distributed lags • Estimation of—— and leads with end point constraints. Donald W.K. Andrews and Ray C. Fair. **53** (1992) 123–139
Polynomial transformation • Some generalizations on the algebra of I(1) processes. Luigi Ermini and Clive W.J. Granger. **58** (1993) 369–384
Pooling techniques • Bayesian and non-Bayesian methods for combining models and forecasts with applications to forecasting international growth rates. Chung-ki Min and Arnold Zellner. **56** (1993) 89–118
Posterior inference • Robust Bayesian inference in elliptical regression models. Jacek Osiewalski and Mark F.J. Steel. **57** (1993) 345–363
Posterior odds • Bayesian and non-Bayesian methods for combining models and forecasts with applications to forecasting international growth rates. Chung-ki Min and Arnold Zellner. **56** (1993) 89–118

Power comparisons
A comparison of nonnested tests for misspecified models using the method of approximate slopes. Jeffrey E. Zabel. **57** (1993) 205–232
Alternative point-optimal tests for regression coefficient stability. Robert D. Brooks. **57** (1993) 365–376
Monte Carlo results on several new and existing tests for the error component models. Badi H. Baltagi, Young-Jae Chang, and Qu Li. **54** (1992) 95–120
Power function(s)
On the —— of the Durbin-Watson test. Robert Bartels. **51** (1992) 101–112
Testing linear restrictions on coefficients in a linear regression model with proxy variables and spherically symmetric disturbances. Kazuhiro Ohtani and Judith Giles. **57** (1993) 393–406
Power problems • The —— of unit root tests in time series with autoregressive errors. David N. Dejong, John C. Nankervis, N.E. Savin, and Charles H. Whiteman. **53** (1992) 323–343
Power properties
Testing for autoregressive disturbances in a time series regression with missing observations. Thomas S. Shively. **57** (1993) 233–255
Testing for a unit root in time series using instrumental variable estimators with pretest data based model selection. Alastair Hall. **54** (1992) 223–250
Predetermination • Tests of overidentification and —— in simultaneous equation models. T.W. Anderson and Naoto Kunitomo. **54** (1992) 49–78
Prediction-error variances • Misspecifications in vector autoregressions and their effects on impulse responses and variance decompositions. Phillip A. Braun and Stefan Mittnik. **59** (1993) 319–341
Prediction tests • Bayesian —— for structural stability. Jeffrey A. Mills. **52** (1992) 381–388
Predictive density estimator • Highest —— in regression models. Shigeru Iwata. **53** (1992) 271–295
Predictive loss structure • Bayesian and non-Bayesian methods for combining models and forecasts with applications to forecasting international growth rates. Chung-ki Min and Arnold Zellner. **56** (1993) 89–118
Pre-experimental observations • The optimal choice of controls and ——. Theo Nijman and Marno Verbeek. **51** (1992) 183–189
Preference parameters • Distribution theory for the analysis of binary choice under uncertainty with nonparametric estimation of expectations. Hyungtaik Ahn and Charles F. Manski. **56** (1993) 291–321
Preference test • A revealed —— test for weakly separable utility maximization with incomplete adjustment. James L. Swofford and Gerald A. Whitney. **60** (1994) 235–249
Pretest data based model selection
Testing for a unit root in time series using instrumental variable estimators with ——. Alastair Hall. **54** (1992) 223–250
Testing for a unit root in time series using instrumental variable estimators with ——(Vol. 54 (1992) pp. 223–250). Erratum. Alastair Hall. . . . . **60** (1994) 321.
Pre-testing • Estimation of the error variance after a preliminary-test of homogeneity in a regression model with spherically symmetric disturbances. Judith A. Giles. **53** (1992) 345–361
Pre-testing for linear restrictions in a regression model with spherically symmetric disturbances (50 (1991) 377–398). Errata. Judith A. Giles. **58** (1993) 403
Price functions • Econometric issues of estimating hedonic ——: With an application to the U.S. market for automobiles. Nestor M. Arguea and Cheng Hsiao. **56** (1993) 243–267
Prior densities • Bayesian marginal equivalence of elliptical regression models. Jacek Osiewalski and Mark F.J. Steel. **59** (1993) 391–403

Prior-posterior analysis * Bayes inference in the Tobit censored regression model. Siddhartha Chib. **51** (1992) 79–99
Probability simulators * Smooth unbiased multivariate —— simulators for maximum likelihood estimation of limited dependent variable models. Axel Borsch-Supan and Vassilis A. Hajivassiliou. **58** (1993) 347–368
Probit model * Estimation and testing in the random effects ——. David K. Guilkey and James L. Murphy. **59** (1993) 301–317
Probit versus logit models * A simulation approach to the problem of computing Cox's statistic for testing nonnested models. M. Hashem Pesaran and Bahram Pesaran. **57** (1993) 377–392
Production indices
Discussion: Forecasting time series with common seasonal patterns. John Geweke. **55** (1993) 201–202
Forecasting time series with common seasonal patterns. Fabio Canova. **55** (1993) 173–200
Production smoothing model
Discussion: Induced seasonality and —— of inventory behavior. Alastair Hall. **55** (1993) 169–172
Discussion: The importance of seasonality in inventory models. Jean-Marie Dufour. **55** (1993) 129–133
Induced seasonality and —— of inventory behavior. Spencer D. Krane. **55** (1993) 135–168
The importance of seasonality in inventory models: Evidence from business survey data. Marc Nerlov, David Ross, and Douglas Willson. **55** (1993) 105–128
Production technologies * Making noisy data sing: Estimating —— in developing countries. James R. Tybout. **53** (1992) 25–44
Productivity measurement * Morrison's measure of capacity utilization: A critique. James H. Hauver and Jet Yee. **52** (1992) 403–406
Proportional hazards estimation * Semiparametric —— of competing risks models with time-varying covariates. Glenn T. Sueyoshi. **51** (1992) 25–58
Proportional hazards specification
A method for the analysis of the timing and magnitude of events in a continuous-time panel: The effects of British incomes policy, 1950–73. Masako Kurosawa and Stephen Pudney. **59** (1993) 161–185
Modelling inaccuracies in job-search duration data. Nicola Torelli and Ugo Trivellato. **59** (1993) 187–211
Proxy variables * Testing linear restrictions on coefficients in a linear regression model with —— and spherically symmetric disturbances. Kazuhiro Ohtani and Judith Giles. **57** (1993) 393–406
Pseudo-likelihood techniques * Qualitative threshold ARCH models. Christian Gourieroux and Alain Monfort. **52** (1992) 159–199
Pseudo maximum likelihood * Simulation-based inference: A survey with special reference to panel data models. Christian Gourieroux and Alain Monfort. **59** (1993) 5–33
Pseudo panels
Editors' introduction. The econometrics of panels and ——. Carlo Carraro, Franco Peracchi, and Guglielmo Weber. **59** (1993) 1–4
Identification and estimation of dynamic models with a time series of repeated cross sections. Robert Moffitt. **59** (1993) 99–123
Labour supply and intertemporal substitution. Richard Blundell, Costas Meghir, and Pedro Neves. **59** (1993) 137–160
Minimum MSE estimation of a regression model with fixed effects from a series of cross-sections. Marno Verbeek and Theo Nijman. . . **59** (1993) 125–136
The econometrics of panels and ——. Edited by Carlo Carraro, Franco Peracchi, and Guglielmo Weber. **59** (1993) 1–211
Pseudo-R-squared measure * A —— for limited and qualitative dependent variable models. Thomas Laitila. **56** (1993) 341–356

Q model of investment • Investment and Tobin's Q: Evidence from company panel data. Richard Blundell, Stephen Bond, Michael Devereux, and Fabio Schiantarelli. **51** (1992) 233–257
Quadratic direct utility system • Coherency and regularity of demand systems with equality and inequality constraints. Arthur van Soest, Arie Kapteyn, and Peter Kooreman. **57** (1993) 161–188
Quadratic mode regression. Myoung-jae Lee. **57** (1993) 1–19
Qualitative dependent variable models • A pseudo-R-squared measure for limited and ——. Thomas Laitila. **56** (1993) 341–356
Qualitative threshold ARCH models. Christian Gourieroux and Alain Monfort. **52** (1992) 159–199
Quantile estimation • Regression-based methods for using control variables in Monte Carlo experiments. Russell Davidson and James G. MacKinnon. **54** (1992) 203–222
Quasi-Aitken estimation for heteroskedasticity of unknown form. John G. Cragg. **54** (1992) 179–201

R-squared measure • A pseudo- —— for limited and qualitative dependent variable models. Thomas Laitila. **56** (1993) 341–356
Random effects model
A monotonic property for iterative GLS in the two-way ——. Badi H. Baltagi and Qi Li. **53** (1992) 45–51
Simultaneous equations and panel data. Christopher Cornwell, Peter Schmidt, and Donald Wyhowski. **51** (1992) 151–181
Random effects probit model • Estimation and testing in the ——. David K. Guilkey and James L. Murphy. **59** (1993) 301–317
Random functions • Generic uniform convergence and equicontinuity concepts for ——: An exploration of the basic structure. Benedikt M. Potscher and Ingmar R. Prucha. **60** (1994) 23–63
Random walk
A simple multiple variance ratio test. K. Victor Chow and Karen C. Denning. **58** (1993) 385–401
Testing the null hypothesis of stationarity against the alternative of a unit root: How sure are we that economic time series have a unit root? Denis Kwiatkowski, Peter C.B. Phillips, Peter Schmidt, and Yongcheol Shin. **54** (1992) 159–178
The spurious effect of unit roots on vector autoregressions: An analytical study. Hiro Y. Toda and Peter C.B. Phillips. **59** (1993) 229–255
Time series properties of aggregate output fluctuations. Steven N. Durlauf. **56** (1993) 39–56
Random walk plus noise model • Unobserved component time series models with ARCH disturbances. Andrew Harvey, Esther Ruiz, and Enrique Sentana. **52** (1992) 129–157
Ratio test • A simple multiple variance ——. K. Victor Chow and Karen C. Denning. **58** (1993) 385–401
Rational bidding • Deciding between the common and private value paradigms in empirical models of auctions. Harry J. Paarsch. **51** (1992) 191–215
Rational expectations modeling with seasonally adjusted data. Christopher A. Sims. **55** (1993) 9–19
Rational expectations models
Estimating limited-dependent —— with an application to exchange rate determination in a target zone. M. Hashem Pesaran and Hossein Samiei. **53** (1992) 141–163
Saddlepath solutions for multivariate linear ——. Michael K. Salemi and Jaeyeong Song. **53** (1992) 245–269
Seasonality and approximation errors in ——. Lars Peter Hansen and Thomas J. Sargent. **55** (1993) 21–55

Recall bias • Modelling inaccuracies in job-search duration data. Nicola Torelli and Ugo Trivellato. **59** (1993) 187–211
Rectangular kernel • Quadratic mode regression. Myoung-jae Lee. . . . **57** (1993) 1–19
Recursive procedures • Maximum likelihood estimation of stationary univariate fractionally integrated time series models. Fallaw Sowell. **53** (1992) 165–188
Reduced form estimation • Estimating limited-dependent rational expectations models with an application to exchange rate determination in a target zone. M. Hashem Pesaran and Hossein Samiei. **53** (1992) 141–163
Regression • Quadratic mode——. Myoung-jae Lee. **57** (1993) 1–19
Regression, median • Median regression for ordered discrete response. Myoung-jae Lee. **51** (1992) 59–77
Regression-based methods for using control variables in Monte Carlo experiments. Russell Davidson and James G. MacKinnon. **54** (1992) 203–222
Regression coefficient stability • Alternative point-optimal tests for——. Robert D. Brooks. **57** (1993) 365–376
Regression estimation methods • Efficient estimation and testing of cointegrating vectors in the presence of deterministic trends. Bruce E. Hansen. **53** (1992) 87–121
Regression functions • Maximum entropy estimation of density and——. Hang K. Ryu. **56** (1993) 397–440
Regression model(s)
Adaptive estimation in time series——. Douglas G. Steigerwald. . **54** (1992) 251–275
Highest predictive density estimator in——. Shigeru Iwata. **53** (1992) 271–295
More on grouping coarseness in linear normal——. Steven B. Caudill. **52** (1992) 407–417
Overdispersion tests for truncated Poisson——. Shiferaw Gurmu and Pravin K. Trivedi. **54** (1992) 347–370
Pre-testing for linear restrictions in a—— with spherically symmetric disturbances (50 (1991) 377–398). Errata. Judith A. Giles. **58** (1993) 403
Properties of ordinary least squares estimators in——with nonspherical disturbances. Denzil G. Fiebig, Michael McAleer, and Robert Bartels. **54** (1992) 321–334
Some aspects of measurement error in a censored——. Andrew A. Weiss. **56** (1993) 169–188
Testing superexogeneity and invariance in——. Robert F. Engle and David F. Hendry. **56** (1993) 119–139
Regressors problem • Calculating the (local) semiparametric efficiency bounds for the generated——. Paul Rilstone. **56** (1993) 357–370
Regularity conditions • Coherency and regularity of demand systems with equality and inequality constraints. Arthur van Soest, Arie Kapteyn, and Peter Kooreman. **57** (1993) 161–188
Repeated cross-sections • Identification and estimation of dynamic models with a time series of——. Robert Moffitt. **59** (1993) 99–123
Repeat-spell duration model • A method for the analysis of the timing and magnitude of events in a continuous-time panel: The effects of British incomes policy, 1950-73. Masako Kurosawa and Stephen Pudney. **59** (1993) 161–185
Residual-based tests
Efficient estimation and testing of cointegrating vectors in the presence of deterministic trends. Bruce E. Hansen. **53** (1992) 87–121
Spurious regressions and—— for cointegration when regressors are cointegrated. In Choi. **60** (1994) 313–320
Testing for a unit root in time series using instrumental variable estimators with pretest data based model selection. Alastair Hall. **54** (1992) 223–250
Response analysis
Editors' introduction. Nonparametric and semiparametric approaches to discrete——. Wolfgang Hardle and Charles F. Manski. . . . **58** (1993) 1–2

Nonparametric and semiparametric approaches to discrete——. Edited by Wolfgang Hardle and Charles F. Manski. **58** (1993) 1–274

Response surface regressions • A comparison of nonnested tests for misspecified models using the method of approximate slopes. Jeffrey E. Zabel. **57** (1993) 205–232

Ridge-walking algorithm, Deaton's • A monotonic property for iterative GLS in the two-way random effects model (with Badi H. Baltagi). **53** (1992) 45–51

Right-hand-side endogenous variables • Exact densities for variance estimators of the structural disturbances in simultaneous equations models. Murray D. Smith. **60** (1994) 157–180

Risk aversion • Measuring——from excess returns on a stock index. Ray Chou, Robert F. Engle, and Alex Kane. **52** (1992) 201–224

Risk premia • A multi-dynamic-factor model for stock returns. Victor Ng, Robert F. Engle, and Michael Rothschild. **52** (1992) 245–266

Risk-premium forecasts • A comparison of—— implied by parametric versus nonparametric conditional mean estimators. Thomas H. McCurdy and Thanasis Stengos. **52** (1992) 225–244

Risk properties

Estimation of the error variance after a preliminary-test of homogeneity in a regression model with spherically symmetric disturbances. Judith A. Giles. **53** (1992) 345–361

Testing and estimating location vectors when the error covariance matrix is unknown. William Griffiths and George Judge. **54** (1992) 121–138

Risks models • Semiparametric proportional hazards estimation of competing——with time-varying covariates. Glenn T. Sueyoshi. **51** (1992) 25–58

Robust Bayesian inference in elliptical regression models. Jacek Osiewalski and Mark F.J. Steel. **57** (1993) 345–363

Robust covariance matrix • Heteroskedastic cointegration. Bruce E. Hansen. **54** (1992) 139–158

Robustness of size of tests of autocorrelation and heteroscedasticity to nonnormality. Merran Evans. **51** (1992) 7–24

Roots, multiple • A note on multiple roots of the Tobit log likelihood. Shigeru Iwata. **56** (1993) 441–446

Roy model of selectivity • Measuring the unidentified parameter of the extended——. Wim P.M. Vijverberg. **57** (1993) 69–89

Saddlepath solutions for multivariate linear rational expectations models. Michael K. Salemi and Jaeyeong Song. **53** (1992) 245–269

Sample autocorrelations • Higher-order——and the unit root hypothesis. Herman J. Bierens. **57** (1993) 137–160

Sample behavior

Maximum likelihood inference on cointegration and seasonal cointegration. Hahn Shik Lee. **54** (1992) 1–47

On the finite——of adaptive estimators. Douglas G. Steigerwald. . **54** (1992) 371–400

Sample evidence • Finite—— on the performance of stochastic frontiers and data envelopment analysis using panel data. Byeong-Ho Gong and Robin C. Sickles. **51** (1992) 259–284

Sample selection models • Tests of specification for parametric and semiparametric models. Yoon-Jae Whang and Donald W.K. Andrews. **57** (1993) 277–318

Sample size, finite • Testing the null hypothesis of stationarity against the alternative of a unit root: How sure are we that economic time series have a unit root? Denis Kwiatkowski, Peter C.B. Phillips, Peter Schmidt, and Yongcheol Shin. **54** (1992) 159–178

Sampling, finite • Adaptive estimation in time series regression models. Douglas G. Steigerwald. **54** (1992) 251–275

Sampling error
Discussion: The effect of —— on the time series behavior of consumption data. Allan W. Gregory and Tony Wirjanto. **55** (1993) 267–273
The effect of —— on the time series behavior of consumption data. William R. Bell and David W. Wilcox. **55** (1993) 235–265
Sampling experiment(s)
Exogeneity tests in a truncated structural equation. Hiroki Tsurumi and Peter Mehr. **56** (1993) 371–396
Quasi-Aitken estimation for heteroskedasticity of unknown form. John G. Cragg. **54** (1992) 179–201
Testing and estimating location vectors when the error covariance matrix is unknown. William Griffiths and George Judge. **54** (1992) 121–138
Score tests
Joint and separate —— for state dependence and unobserved heterogeneity. Sanjiv Jaggia and Pravin K. Trivedi. **60** (1994) 273–291
Overdispersion tests for truncated Poisson regression models. Shiferaw Gurmu and Pravin K. Trivedi. **54** (1992) 347–370
Scoring
Discussion: Dynamic linear models for time series components. David F. Findley. **55** (1993) 353–356
Dynamic linear models for time series components. Estela Bee Dagum and Benoit Quenneville. **55** (1993) 333–351
Search algorithms * On the computation of semiparametric estimates in limited dependent variable models. C.A.P. Pinkse. **58** (1993) 185–205
Seasonal adjustment filters
Discussion: The effect of —— on tests for a unit root. Francis X. Diebold. **55** (1993) 99–103
The effect of —— on tests for a unit root. Eric Ghysels and Pierre Perron. **55** (1993) 57–98
Seasonal BVAR models * Discussion: ——. Arnold Zellner. **55** (1993) 231–234
Seasonal BVAR models: A search along some time domain priors. Jacques Raynauld and Jean-Guy Simonato. **55** (1993) 203–229
Seasonal cointegration
Discussion: ——. Denise R. Osborn. **55** (1993) 299–303
Maximum likelihood inference on cointegration and ——. Hahn Shik Lee. **54** (1992) 1–47
Seasonal cointegration: The Japanese consumption function. R.F. Engle, C.W.J. Granger, S. Hylleberg, and H.S. Lee. **55** (1993) 275–298
Seasonal patterns
Discussion: Forecasting time series with common ——. John Geweke. **55** (1993) 201–202
Forecasting time series with common ——. Fabio Canova. **55** (1993) 173–200
Seasonal time series
Discussion: The effect of sampling error on the time series behavior of consumption data. Allan W. Gregory and Tony Wirjanto. **55** (1993) 267–273
The effect of sampling error on the time series behavior of consumption data. William R. Bell and David W. Wilcox. **55** (1993) 235–265
Seasonal unit roots * Discussion: —— in aggregate U.S. data. David A. Dickey. **55** (1993) 329–331
Seasonal unit roots in aggregate U.S. data. J. Joseph Beaulieu and Jeffrey A. Miron. **55** (1993) 305–328
Seasonality
Discussion: Induced —— and production-smoothing models of inventory behavior. Alastair Hall. **55** (1993) 169–172
Discussion: The importance of —— in inventory models. Jean-Marie Dufour. **55** (1993) 129–133
Editor's introduction. —— and econometric models. Eric Ghysels. . **55** (1993) 1–8

Induced —— and production-smoothing models of inventory behavior. Spencer D. Krane. **55** (1993) 135–168
The importance of —— in inventory models: Evidence from business survey data. Marc Nerlov, David Ross, and Douglas Willson. . **55** (1993) 105–128
Seasonality and approximation errors in rational expectations models. Lars Peter Hansen and Thomas J. Sargent. **55** (1993) 21–55
Seasonality and econometric models. Edited by Eric Ghysels. **55** (1993) 1–356
Seasonally adjusted data * Rational expectations modeling with ——. Christopher A. Sims. **55** (1993) 9–19
Seemingly unrelated regressions under additive heteroscedasticity: Theory and share equation applications. David M. Mandy and Carlos Martins-Filho. **58** (1993) 315–346
Selection bias * Experimental estimates of the impact of wage subsidies. Jeffrey A. Dubin and Douglas Rivers. **56** (1993) 219–242
Selection models
Efficiency bounds for some semiparametric ——. Whitney K. Newey and James L. Powell. **58** (1993) 169–184
Semiparametric estimation of censored —— with a nonparametric selection mechanism. Hyungtaik Ahn and James L. Powell. . . . **58** (1993) 3–29
Selectivity * Measuring the unidentified parameter of the extended Roy model of ——. Wim P.M. Vijverberg. **57** (1993) 69–89
Selectivity bias * Efficiency bounds for some semiparametric selection models. Whitney K. Newey and James L. Powell. **58** (1993) 169–184
Selectivity bias correction methods in polychotomous sample selection models. Carl P. Schmertmann. **60** (1994) 101–132
Self-selection * Selectivity bias correction methods in polychotomous sample selection models. Carl P. Schmertmann. **60** (1994) 101–132
Semiparametric approaches
Editors' introduction. Nonparametric and —— to discrete response analysis. Wolfgang Hardle and Charles F. Manski. **58** (1993) 1–2
Nonparametric and —— to discrete response analysis. Edited by Wolfgang Hardle and Charles F. Manski. **58** (1993) 1–274
Semiparametric discrete choice models * Some efficiency bounds for ——. T. Scott Thompson. **58** (1993) 257–274
Semiparametric efficiency bounds * Calculating the (local) —— for the generated regressors problem. Paul Rilstone. **56** (1993) 357–370
Semiparametric estimates * On the computation of —— in limited dependent variable models. C.A.P. Pinkse. **58** (1993) 185–205
Semiparametrc estimation of censored selection models with a nonparametric selection mechanism. Hyungtaik Ahn and James L. Powell. **58** (1993) 3–29
Semiparametric estimation of a work-trip mode choice model. Joel L. Horowitz. **58** (1993) 49–70
Semiparametric index models * How sensitive are average derivatives? Wolfgang Hardle and A.B. Tsybakov. **58** (1993) 31–48
Semiparametric least squares (SLS) and weighted SLS estimation of single-index models. Hidehiko Ichimura. **58** (1993) 71–120
Semiparametric modelling * Nonparametric evidence on asymmetry in business cycles using aggregate employment time series. Robert Hussey. **51** (1992) 217–231
Semiparametric models * Tests of specification for parametric and ——. Yoon-Jae Whang and Donald W.K. Andrews. **57** (1993) 277–318
Semiparametric proportional hazards estimation of competing risks models with time-varying covariates. Glenn T. Sueyoshi. **51** (1992) 25–58
Semiparametric quasilikelihood and variance function estimation in measurement error models. J.H. Sepanski and R.J. Carroll. . . . **58** (1993) 223–256
Semiparametric selection models * Efficiency bounds for some ——. Whitney K. Newey and James L. Powell. **58** (1993) 169–184

Serial correlation
Adaptive estimation in time series regression models. Douglas G. Steigerwald. **54** (1992) 251–275
On the finite sample behavior of adaptive estimators. Douglas G. Steigerwald. **54** (1992) 371–400
The power problems of unit root tests in time series with autoregressive errors. David N. Dejong, John C. Nankervis, N.E. Savin, and Charles H. Whiteman. **53** (1992) 323–343
Share equation applications • Seemingly unrelated regressions under additive heteroscedasticity: Theory and——. David M. Mandy and Carlos Martins-Filho. **58** (1993) 315–346
Simulated annealing • Global optimization of statistical functions with ——. William L. Goffe, Gary D. Ferrier, and John Rogers. . . . **60** (1994) 65–99
Simulation approach • A—— to the problem of computing Cox's statistic for testing nonnested models. M. Hashem Pesaran and Bahram Pesaran. **57** (1993) 377–392
Simulation-based inference: A survey with special reference to panel data models. Christian Gourieroux and Alain Monfort. **59** (1993) 5–33
Simulation study
Structural duration analysis of management data. Keunkwan Ryu. . . **57** (1993) 91–115
Testing for a unit root in time series using instrumental variable estimators with pretest data based model selection. Alastair Hall. **54** (1992) 223–250
Simultaneous equations and panel data. Christopher Cornwell, Peter Schmidt, and Donald Wyhowski. **51** (1992) 151–181
Simultaneous equations for hazards: Marriage duration and fertility timing. Lee A. Lillard. **56** (1993) 189–217
Simultaneous equations model(s)
Asymptotic and finite sample distribution theory for IV estimators and tests in partially identified structural equations. In Choi and Peter C.B. Phillips. **51** (1992) 113–150
Exact densities for variance estimators of the structural disturbances in——. Murray D. Smith. **60** (1994) 157–180
Tests of overidentification and predetermination in——. T.W. Anderson and Naoto Kunitomo. **54** (1992) 49–78
The potential for efficiency gains in estimation from the use of additional moment restrictions. Gordon C.R. Kemp. **53** (1992) 387–399
Single-equation analysis • Cointegration in partial systems and the efficiency of——. Soren Johansen. **52** (1992) 389–402
Single-equation estimators • Finite-sample properties of—— under structural change. Jiro Hodoshima. **53** (1992) 189–209
Single-index selectivity bias model • Semiparametric estimation of censored selection models with a nonparametric selection mechanism. Hyungtaik Ahn and James L. Powell. **58** (1993) 3–29
Skewness • Robustness to nonnormality of the Durbin-Watson test for autocorrelation. Mukhtar M. Ali and Subhash C. Sharma. . . . **57** (1993) 117–136
Small sample performance • Nonnested testing for autocorrelation in the linear regression model. Paramsothy Silvapulle and Maxwell L. King. **58** (1993) 295–314
Small sample properties • Robustness of size of tests of autocorrelation and heteroscedasticity to nonnormality. Merran Evans. **51** (1992) 7–24
Smooth unbiased multivariate probability simulators for maximum likelihood estimation of limited dependent variable models. Axel Borsch-Supan and Vassilis A. Hajivassiliou. **58** (1993) 347–368
Smoothing models
Discussion: Induced seasonality and production-—— of inventory behavior. Alastair Hall. **55** (1993) 169–172
Discussion: The importance of seasonality in inventory models. Jean-Marie Dufour. **55** (1993) 129–133

Dynamic linear models with Markov-switching. Chang-Jin Kim. . . **60** (1994) 1–22
Induced seasonality and production-—— of inventory behavior. Spencer D. Krane. **55** (1993) 135–168
The importance of seasonality in inventory models: Evidence from business survey data. Marc Nerlov, David Ross, and Douglas Willson. **55** (1993) 105–128
Social learning proposition * Dynamic choice in social settings: Learning from the experiences of others. Charles F. Manski. **58** (1993) 121–136
Specification * Tests of—— for parametric and semiparametric models. Yoon-Jae Whang and Donald W.K. Andrews. **57** (1993) 277–318
Specification diagnostics for duration models: A martingale approach. Brian P. McCall. **60** (1994) 293–312
Specification error * Testing for autocorrelation in the presence of lagged dependent variables: A—— approach. Hashem Dezhbakhsh and Jerry G. Thursby. **60** (1994) 251–272
Specification tests * On the testing of correlated effects with panel data. Manuel Arellano. **59** (1993) 87–97
Specification tests for binary choice models based on index quantiles. Roger W. Klein. **59** (1993) 343–375
Spectral distribution function * Time series properties of aggregate output fluctuations. Steven N. Durlauf. **56** (1993) 39–56
Spherically symmetric disturbances
Estimation of the error variance after a preliminary-test of homogeneity in a regression model with——. Judith A. Giles. **53** (1992) 345–361
Pre-testing for linear restrictions in a regression model with—— (50 (1991) 377–398). Errata. Judith A. Giles. **58** (1993) 403
Testing linear restrictions on coefficients in a linear regression model with proxy variables and——. Kazuhiro Ohtani and Judith Giles. **57** (1993) 393–406
Spurious regressions and residual-based tests for cointegration when regressors are cointegrated. In Choi. **60** (1994) 313–320
Stability * Bayesian prediction tests for structural——. Jeffrey A. Mills. **52** (1992) 381–388
State dependence * Joint and separate score tests for—— and unobserved heterogeneity. Sanjiv Jaggia and Pravin K. Trivedi. **60** (1994) 273–291
State space approach
Discussion: Dynamic linear models for time series components. David F. Findley. **55** (1993) 353–356
Dynamic linear models for time series components. Estela Bee Dagum and Benoit Quenneville. **55** (1993) 333–351
Dynamic linear models with Markov-switching. Chang-Jin Kim. . . **60** (1994) 1–22
State space alternative * Local scale models: ——to integrated GARCH processes. Neil Shephard. **60** (1994) 181–202
State space multivariate time series modeling * A Bayesian approach to——. Jeffrey H. Dorfman and Arthur M. Havenner. **52** (1992) 315–346
Stationarity
Higher-order sample autocorrelations and the unit root hypothesis. Herman J. Bierens. **57** (1993) 137–160
Testing the null hypothesis of——against the alternative of a unit root: How sure are we that economic time series have a unit root? Denis Kwiatkowski, Peter C.B. Phillips, Peter Schmidt, and Yongcheol Shin. **54** (1992) 159–178
Stationarity of GARCH processes and of some nonnegative time series. Philippe Bougerol and Nico Picard. **52** (1992) 115–127
Stationary error * Testing the null hypothesis of stationarity against the alternative of a unit root: How sure are we that economic time series have a unit root? Denis Kwiatkowski, Peter C.B. Phillips, Peter Schmidt, and Yongcheol Shin. **54** (1992) 159–178

Stationary univariate fractionally integrated time series models • Maximum likelihood estimation of——. Fallaw Sowell. **53** (1992) 165–188
Stepwise functions, endogenous • Qualitative threshold ARCH models. Christian Gourieroux and Alain Monfort. **52** (1992) 159–199
Stochastic and deterministic trends • The impact of—— on money-output causality: A multi-country investigation (45 (1990) 291–308). Errata. Robert Krol and Lee E. Ohanian. **58** (1993) 405
Stochastic equicontinuity • Generic uniform convergence and equicontinuity concepts for random functions: An exploration of the basic structure. Benedikt M. Potscher and Ingmar R. Prucha. **60** (1994) 23–63
Stochastic frontiers • Finite sample evidence on the performance of—— and data envelopment analysis using panel data. Byeong-Ho Gong and Robin C. Sickles. **51** (1992) 259–284
Stochastic linear trends: Models and estimators. Agustin Maravall. ... **56** (1993) 5–37
Stochastic process(es)
Filtering and forecasting with misspecified ARCH models I: Getting the right variance with the wrong model. Daniel B. Nelson. **52** (1992) 61–90
Some generalizations on the algebra of I(1) processes. Luigi Ermini and Clive W.J. Granger. **58** (1993) 369–384
Tests of specification for parametric and semiparametric models. Yoon-Jae Whang and Donald W.K. Andrews. **57** (1993) 277–318
Stochastic regressors • Exogeneity tests in a truncated structural equation. Hiroki Tsurumi and Peter Mehr. **56** (1993) 371–396
Stochastic simulation
A simulation approach to the problem of computing Cox's statistic for testing nonnested models. M. Hashem Pesaran and Bahram Pesaran. **57** (1993) 377–392
Implied ARCH models from options prices. Robert F. Engle and Chowdhury Mustafa. **52** (1992) 289–311
Stochastic volatility • Local scale models: State space alternative to integrated GARCH processes. Neil Shephard. **60** (1994) 181–202
Stock index • Measuring risk aversion from excess returns on a——. Ray Chou, Robert F. Engle, and Alex Kane. **52** (1992) 201–224
Stock index, Paris • Qualitative threshold ARCH models. Christian Gourieroux and Alain Monfort. **52** (1992) 159–199
Stock market volatility and the information content of stock index options. Theodore E. Day and Craig M. Lewis. **52** (1992) 267–287
Stock returns • A multi-dynamic-factor model for——. Victor Ng, Robert F. Engle, and Michael Rothschild. **52** (1992) 245–266
Stock-Watson test • Another look at the evidence on money-income causality. Benjamin M. Friedman and Kenneth N. Kuttner. ... **57** (1993) 189–203
Structural ARCH (STARCH) • Unobserved component time series models with ARCH disturbances. Andrew Harvey, Esther Ruiz, and Enrique Sentana. **52** (1992) 129–157
Structural change • Finite-sample properties of single-equation estimators under——. Jiro Hodoshima. **53** (1992) 189–209
Structural disturbances • Exact densities for variance estimators of the—— in simultaneous equations models. Murray D. Smith. . **60** (1994) 157–180
Structural duration analysis of management data. Keunkwan Ryu. ... **57** (1993) 91–115
Structural equation(s)
Asymptotic and finite sample distribution theory for IV estimators and tests in partially identified——. In Choi and Peter C.B. Phillips. **51** (1992) 113–150
Exogeneity tests in a truncated——. Hiroki Tsurumi and Peter Mehr. **56** (1993) 371–396
Simultaneous equations and panel data. Christopher Cornwell, Peter Schmidt, and Donald Wyhowski. **51** (1992) 151–181

Tests of overidentification and predetermination in simultaneous equation models. T.W. Anderson and Naoto Kunitomo. **54** (1992) 49–78
Structural hypotheses * Testing —— in a multivariate cointegration analysis of the PPP and the UIP for UK. Soren Johansen and Katarina Juselius. **53** (1992) 211–244
Structural shift * A comparison of several exact and approximate tests for —— under heteroscedasticity. Jerry G. Thursby. **53** (1992) 363–386
Structural stability * Bayesian prediction tests for ——. Jeffrey A. Mills. **52** (1992) 381–388
Structural variance estimator * Exact densities for variance estimators of the structural disturbances in simultaneous equations models. Murray D. Smith. **60** (1994) 157–180
Student-t regression models * Bayes regression with autoregressive errors: A Gibbs sampling approach. Siddhartha Chib. **58** (1993) 275–294
Studentized maximum modulus variates * A simple multiple variance ratio test. K. Victor Chow and Karen C. Denning. **58** (1993) 385–401
Superexogeneity * Testing —— and invariance in regression models. Robert F. Engle and David F. Hendry. **56** (1993) 119–139
Switching regimes, endogenously * Coherency and regularity of demand systems with equality and inequality constraints. Arthur van Soest, Arie Kapteyn, and Peter Kooreman. **57** (1993) 161–188
Symmetric disturbances
Estimation of the error variance after a preliminary-test of homogeneity in a regression model with spherically ——. Judith A. Giles. . . **53** (1992) 345–361
Testing linear restrictions on coefficients in a linear regression model with proxy variables and spherically ——. Kazuhiro Ohtani and Judith Giles. **57** (1993) 393–406
Symmetrically trimmed least squares * Quadratic mode regression. Myoung-jae Lee. **57** (1993) 1–19

Technical efficiency
A simplification of the Kopp-Diewert method of decomposing cost efficiency and some implications. Yaw M. Mensah. **60** (1994) 133–144
Finite sample evidence on the performance of stochastic frontiers and data envelopment analysis using panel data. Byeong-Ho Gong and Robin C. Sickles. **51** (1992) 259–284
Measuring —— with panel data: A dual approach. Scott E. Atkinson and Christopher Cornwell. **59** (1993) 257–261
Test statistics
Computing p-values for the generalized Durbin-Watson and other invariant ——. Craig F. Ansley, Robert Kohn, and Thomas S. Shively. **54** (1992) 277–300
Exogeneity tests in a truncated structural equation. Hiroki Tsurumi and Peter Mehr. **56** (1993) 371–396
Theil-Tornqvist indices * An econometric approach to the construction of generalized —— for multilateral comparisons. E.A. Selvanathan and D.S. Prasada Rao. **54** (1992) 335–346
Theory and share equation applications * Seemingly unrelated regressions under additive heteroscedasticity: ——. David M. Mandy and Carlos Martins-Filho. **58** (1993) 315–346
Three-stage least squares estimator * Modified —— which is third-order efficient. Kimio Morimune and Shinichi Sakata. **57** (1993) 257–276
Time-dependent conditional variances * Prediction in dynamic models with ——. Richard T. Baillie and Tim Bollerslev. **52** (1992) 91–113
Time domain priors
Discussion: Seasonal BVAR models. Arnold Zellner. **55** (1993) 231–234
Seasonal BVAR models: A search along some ——. Jacques Raynauld and Jean-Guy Simonato. **55** (1993) 203–229

Time domain procedures * Testing for a unit root by frequency domain regression. In Choi and Peter C.B. Phillips. **59** (1993) 263–286
Time duration models * The impact of training on the frequency and duration of employment. R. Mark Gritz. **57** (1993) 21–51
Time models * A nonnested approach to testing continuous —— against discrete alternatives. Marcus J. Chambers. **57** (1993) 319–343
Time series
Bayesian and non-Bayesian methods for combining models and forecasts with applications to forecasting international growth rates. Chung-ki Min and Arnold Zellner. **56** (1993) 89–118
Co-integration and trend-stationarity in macroeconomic ——: Evidence from the likelihood function. David N. DeJong. **52** (1992) 347–370
Discussion: Forecasting —— with common seasonal patterns. John Geweke. **55** (1993) 201–202
Forecasting —— with common seasonal patterns. Fabio Canova. **55** (1993) 173–200
Nonparametric evidence on asymmetry in business cycles using aggregate employment ——. Robert Hussey. **51** (1992) 217–231
Persistence, cointegration, and aggregation: A disaggregated analysis of output fluctuations in the U.S. economy. M.H. Pesaran, R.G. Pierse and K.C. Lee. **56** (1993) 57–88
Testing for a unit root in —— using instrumental variable estimators with pretest data based model selection. Alastair Hall. **54** (1992) 223–250
Testing for a unit root in —— using instrumental variable estimators with pretest data based model selection (Vol. 54 (1992) pp. 223–250). Erratum. Alastair Hall. . . . . **60** (1994) 321.
Testing the null hypothesis of stationarity against the alternative of a unit root: How sure are we that economic —— have a unit root? Denis Kwiatkowski, Peter C.B. Phillips, Peter Schmidt, and Yongcheol Shin. **54** (1992) 159–178
The power problems of unit root tests in —— with autoregressive errors. David N. Dejong, John C. Nankervis, N.E. Savin, and Charles H. Whiteman. **53** (1992) 323–343
Stationarity of GARCH processes and of some nonnegative ——. Philippe Bougerol and Nico Picard. **52** (1992) 115–127
Stochastic linear trends: Models and estimators. Agustin Maravall. **56** (1993) 5–37
Time series, detrended * Higher-order sample autocorrelations and the unit root hypothesis. Herman J. Bierens. **57** (1993) 137–160
Time series behavior
Discussion: The effect of sampling error on the —— of consumption data. Allan W. Gregory and Tony Wirjanto. **55** (1993) 267–273
The effect of sampling error on the —— of consumption data. William R. Bell and David W. Wilcox. **55** (1993) 235–265
Time series components
Discussion: Dynamic linear models for ——. David F. Findley. . . . **55** (1993) 353–356
Dynamic linear models for ——. Estela Bee Dagum and Benoit Quenneville. **55** (1993) 333–351
Time series data
Maximum likelihood inference on cointegration and seasonal cointegration. Hahn Shik Lee. **54** (1992) 1–47
Testing structural hypotheses in a multivariate cointegration analysis of the PPP and the UIP for UK. Soren Johansen and Katarina Juselius. **53** (1992) 211–244
Time series formulation * Stock market volatility and the information content of stock index options. Theodore E. Day and Craig M. Lewis. **52** (1992) 267–287
Time series modeling * A Bayesian approach to state space multivariate ——. Jeffrey H. Dorfman and Arthur M. Havenner. **52** (1992) 315–346

Time series model(s)
Maximum likelihood estimation of stationary univariate fractionally integrated ——. Fallaw Sowell. **53** (1992) 165–188
Prediction in dynamic models with time-dependent conditional variances. Richard T. Baillie and Tim Bollerslev. **52** (1992) 91–113
Testing for neglected nonlinearity in ——: A comparison of neural network methods and alternative tests. Tae-Hwy Lee, Halbert White, and Clive W.J. Granger. **56** (1993) 269–290
Unobserved component —— with ARCH disturbances. Andrew Harvey, Esther Ruiz, and Enrique Sentana. **52** (1992) 129–157
Time series of repeated cross sections * Identification and estimation of dynamic models with a ——. Robert Moffitt. **59** (1993) 99–123
Time series properties of aggregate output fluctuations. Steven N. Durlauf. **56** (1993) 39–56
Time series regression
Computing p-values for the generalized Durbin-Watson and other invariant test statistics. Craig F. Ansley, Robert Kohn, and Thomas S. Shively. **54** (1992) 277–300
Testing for autoregressive disturbances in a —— with missing observations. Thomas S. Shively. **57** (1993) 233–255
Time series regression models
Adaptive estimation in ——. Douglas G. Steigerwald. **54** (1992) 251–275
On the finite sample behavior of adaptive estimators. Douglas G. Steigerwald. **54** (1992) 371–400
Time-varying covariates
A method for the analysis of the timing and magnitude of events in a continuous-time panel: The effects of British incomes policy, 1950–73. Masako Kurosawa and Stephen Pudney. **59** (1993) 161–185
Semiparametric proportional hazards estimation of competing risks models with time-varying covariates. Glenn T. Sueyoshi. **51** (1992) 25–58
Time-varying explanatory variables * A method for the analysis of the timing and magnitude of events in a continuous-time panel: The effects of British incomes policy, 1950–73. Masako Kurosawa and Stephen Pudney. **59** (1993) 161–185
Time-varying parameters
Measuring risk aversion from excess returns on a stock index. Ray Chou, Robert F. Engle, and Alex Kane. **52** (1992) 201–224
Unobserved component time series models with ARCH disturbances. Andrew Harvey, Esther Ruiz, and Enrique Sentana. **52** (1992) 129–157
Time-varying risk premia * A comparison of risk-premium forecasts implied by parametric versus nonparametric conditional mean estimators. Thomas H. McCurdy and Thanasis Stengos. **52** (1992) 225–244
Time-varying variances * A multi-dynamic-factor model for stock returns. Victor Ng, Robert F. Engle, and Michael Rothschild. **52** (1992) 245–266
Tobin's Q * Investment and ——: Evidence from company panel data. Richard Blundell, Stephen Bond, Michael Devereux, and Fabio Schiantarelli. **51** (1992) 233–257
Tobit censored regression model * Bayes inference in the ——. Siddhartha Chib. **51** (1992) 79–99
Tobit log likelihood * A note on multiple roots of the ——. Shigeru Iwata. **56** (1993) 441–446
Tobit models
A pseudo-R-squared measure for limited and qualitative dependent variable models. Thomas Laitila. **56** (1993) 341–356
Orthogonality conditions for —— with fixed effects and lagged dependent variables. Bo E. Honore. **59** (1993) 35–61
Transfer function models * The identification of multivariate linear dynamic errors-in-variables models. Eugen Nowak. **59** (1993) 213–227

Transportation choice model • Semiparametric estimation of a work-trip mode choice model. Joel L. Horowitz. **58** (1993) 49–70
Treasury bill versus commercial paper rate • Another look at the evidence on money-income causality. Benjamin M. Friedman and Kenneth N. Kuttner. **57** (1993) 189–203
Trend exclusion • Efficient estimation and testing of cointegrating vectors in the presence of deterministic trends. Bruce E. Hansen. **53** (1992) 87–121
Trend optimal estimator • Stochastic linear trends: Models and estimators. Agustin Maravall. **56** (1993) 5–37
Trend-stationarity • Co-integration and —— in macroeconomic time series: Evidence from the likelihood function. David N. DeJong. **52** (1992) 347–370
Truncated data • Quadratic mode regression. Myoung-jae Lee. **57** (1993) 1–19
Truncated Poisson regression models • Overdispersion tests for ——. Shiferaw Gurmu and Pravin K. Trivedi. **54** (1992) 347–370
Truncated structural equation • Exogeneity tests in a ——. Hiroki Tsurumi and Peter Mehr. **56** (1993) 371–396
Truncation error • Computing p-values for the generalized Durbin-Watson and other invariant test statistics. Craig F. Ansley, Robert Kohn, and Thomas S. Shively. **54** (1992) 277–300
Two-way random effects model • A monotonic property for iterative GLS in the ——. Badi H. Baltagi and Qi Li. **53** (1992) 45–51

Unbiased choice probabilities • Smooth unbiased multivariate probability simulators for maximum likelihood estimation of limited dependent variable models. Axel Borsch-Supan and Vassilis A. Hajivassiliou. **58** (1993) 347–368
Unbiased multivariate probability simulators • Smooth —— for maximum likelihood estimation of limited dependent variable models. Axel Borsch-Supan and Vassilis A. Hajivassiliou. **58** (1993) 347–368
Uncertainty • Distribution theory for the analysis of binary choice under —— with nonparametric estimation of expectations. Hyungtaik Ahn and Charles F. Manski. **56** (1993) 291–321
Unemployment and immigration data, Canadian • Maximum likelihood inference on cointegration and seasonal cointegration. Hahn Shik Lee. **54** (1992) 1–47
Unidentified parameter • Measuring the —— of the extended Roy model of selectivity. Wim P.M. Vijverberg. **57** (1993) 69–89
Uniform convergence • Generic —— and equicontinuity concepts for random functions: An exploration of the basic structure. Benedikt M. Potscher and Ingmar R. Prucha. **60** (1994) 23–63
Uniform laws of large numbers • Generic uniform convergence and equicontinuity concepts for random functions: An exploration of the basic structure. Benedikt M. Potscher and Ingmar R. Prucha. **60** (1994) 23–63
Unit root(s)
Discussion: Seasonal —— in aggregate U.S. data. David A. Dickey. . **55** (1993) 329–331
Discussion: The effect of seasonal adjustment filters on tests for a ——. Francis X. Diebold. **55** (1993) 99–103
Maximum likelihood inference on cointegration and seasonal cointegration. Hahn Shik Lee. **54** (1992) 1–47
Seasonal —— in aggregate U.S. data. J. Joseph Beaulieu and Jeffrey A. Miron. **55** (1993) 305–328
Testing for a —— by frequency domain regression. In Choi and Peter C.B. Phillips. **59** (1993) 263–286
Testing for a —— in time series using instrumental variable estimators with pretest data based model selection. Alastair Hall. **54** (1992) 223–250
Testing for a —— in time series using instrumental variable estimators with pretest data based model selection (Vol. 54 (1992) pp. 223–250). Erratum. Alastair Hall. **60** (1994) 321

Testing the null hypothesis of stationarity against the alternative of a ——: How sure are we that economic time series have a ——? Denis Kwiatkowski, Peter C.B. Phillips, Peter Schmidt, and Yongcheol Shin. **54** (1992) 159–178
The effect of seasonal adjustment filters on tests for a ——. Eric Ghysels and Pierre Perron. **55** (1993) 57–98
The spurious effect of —— on vector autoregressions: An analytical study. Hiro Y. Toda and Peter C.B. Phillips. **59** (1993) 229–255
Time series properties of aggregate output fluctuations. Steven N. Durlauf. **56** (1993) 39–56
Unit root hypothesis * Higher-order sample autocorrelations and the ——. Herman J. Bierens. **57** (1993) 137–160
Unit root tests * The power problems of —— in time series with autoregressive errors. David N. Dejong, John C. Nankervis, N.E. Savin, and Charles H. Whiteman. **53** (1992) 323–343
Unit root tests with conditional heteroskedasticity. Kiwhan Kim and Peter Schmidt. **59** (1993) 287–300
United States data
Discussion: Seasonal unit roots in aggregate ——. David A. Dickey. **55** (1993) 329–331
Econometric issues of estimating hedonic price functions: With an application to the U.S. market for automobiles. Nestor M. Arguea and Cheng Hsiao. **56** (1993) 243–267
Seasonal unit roots in aggregate ——. J. Joseph Beaulieu and Jeffrey A. Miron. **55** (1993) 305–328
United States economy
Discussion: Seasonal BVAR models. Arnold Zellner. **55** (1993) 231–234
Persistence, cointegration, and aggregation: A disaggregated analysis of output fluctuations in the ——. M.H. Pesaran, R.G. Pierse and K.C. Lee. **56** (1993) 57–88
Seasonal BVAR models: A search along some time domain priors. Jacques Raynauld and Jean-Guy Simonato. **55** (1993) 203–229
Univariate autoregressive model
Discussion: The effect of seasonal adjustment filters on tests for a unit root. Francis X. Diebold. **55** (1993) 99–103
The effect of seasonal adjustment filters on tests for a unit root. Eric Ghysels and Pierre Perron. **55** (1993) 57–98
Univariate binary choice model * A simulation approach to the problem of computing Cox's statistic for testing nonnested models. M. Hashem Pesaran and Bahram Pesaran. **57** (1993) 377–392
Univariate dynamic models
Discussion: The effect of seasonal adjustment filters on tests for a unit root. Francis X. Diebold. **55** (1993) 99–103
The effect of seasonal adjustment filters on tests for a unit root. Eric Ghysels and Pierre Perron. **55** (1993) 57–98
Univariate fractionally integrated time series models * Maximum likelihood estimation of stationary ——. Fallaw Sowell. **53** (1992) 165–188
Univariate regression model * Testing linear restrictions on coefficients in a linear regression model with proxy variables and spherically symmetric disturbances. Kazuhiro Ohtani and Judith Giles. . . . **57** (1993) 393–406
Unknown variance * Confidence sets centered at James-Stein estimators: A surprise concerning the ——. J.T. Gene Hwang and Aman Ullah. **60** (1994) 145–156
Unobserved components * Local scale models: State space alternative to integrated GARCH processes. Neil Shephard. **60** (1994) 181–202
Unobserved heterogeneity * Specification diagnostics for duration models: A martingale approach. Brian P. McCall. **60** (1994) 293–312
Unstable roots * Saddlepath solutions for multivariate linear rational expectations models. Michael K. Salemi and Jaeyeong Song. . . **53** (1992) 245–269

Utility-based Roy model of selectivity * Measuring the unidentified parameter of the extended Roy model of selectivity. Wim P.M. Vijverberg. **57** (1993) 69–89
Utility maximization
A revealed preference test for weakly separable —— with incomplete adjustment. James L. Swofford and Gerald A. Whitney. **60** (1994) 235–249
Discrete/continuous models of consumer demand with binding non-negativity constraints. Jeongwen Chiang and Lung-Fei Lee. ... **54** (1992) 79–93

Value paradigms * Deciding between the common and private —— in empirical models of auctions. Harry J. Paarsch. **51** (1992) 191–215
Value-weighted market portfolio * A multi-dynamic-factor model for stock returns. Victor Ng, Robert F. Engle, and Michael Rothschild. . **52** (1992) 245–266
VAR model * Cointegration in partial systems and the efficiency of single-equation analysis. Soren Johansen. **52** (1992) 389–402
Variance decompositions * Misspecifications in vector autoregressions and their effects on impulse responses and ——. Phillip A. Braun and Stefan Mittnik. **59** (1993) 319–341
Variance estimator(s)
A pseudo-R-squared measure for limited and qualitative dependent variable models. Thomas Laitila. **56** (1993) 341–356
Exact densities for —— of the structural disturbances in simultaneous equations models. Murray D. Smith. **60** (1994) 157–180
Variance function estimation * Semiparametric quasilikelihood and —— measurement error models. J.H. Sepanski and R.J. Carroll. **58** (1993) 223–256
Variance mixing distributions
Estimation of the error variance after a preliminary-test of homogeneity in a regression model with spherically symmetric disturbances. Judith A. Giles. **53** (1992) 345–361
Testing linear restrictions on coefficients in a linear regression model with proxy variables and spherically symmetric disturbances. Kazuhiro Ohtani and Judith Giles. **57** (1993) 393–406
Variance ratio test * A simple multiple ——. K. Victor Chow and Karen C. Denning. **58** (1993) 385–401
Vector autoregression(s)
Another look at the evidence on money-income causality. Benjamin M. Friedman and Kenneth N. Kuttner. **57** (1993) 189–203
Misspecifications in —— and their effects on impulse responses and variance decompositions. Phillip A. Braun and Stefan Mittnik. **59** (1993) 319–341
Testing structural hypotheses in a multivariate cointegration analysis of the PPP and the UIP for UK. Soren Johansen and Katarina Juselius. **53** (1992) 211–244
The spurious effect of unit roots on ——: An analytical study. Hiro Y. Toda and Peter C.B. Phillips. **59** (1993) 229–255
Volatility
Editors' introduction: Statistical models for financial ——. ARCH models in finance. Robert F. Engle and Michael Rothschild. .. **52** (1992) 1–4
Measuring risk aversion from excess returns on a stock index. Ray Chou, Robert F. Engle, and Alex Kane. **52** (1992) 201–224
Statistical models for financial ——. ARCH Models in Finance. Edited by Robert F. Engle and Michael Rothschild. **52** (1992) 1–331
Volatility forecasts
Implied ARCH models from options prices. Robert F. Engle and Chowdhury Mustafa. **52** (1992) 289–311
Stock market volatility and the information content of stock index options. Theodore E. Day and Craig M. Lewis. **52** (1992) 267–287

Wage subsidies • Experimental estimates of the impact of——. Jeffrey A. Dubin and Douglas Rivers. **56** (1993) 219–242
Wald test
Asymptotic and finite sample distribution theory for IV estimators and tests in partially identified structural equations. In Choi and Peter C.B. Phillips. **51** (1992) 113–150
Tests of overidentification and predetermination in simultaneous equation models. T.W. Anderson and Naoto Kunitomo. **54** (1992) 49–78
Weak exogeneity • Cointegration in partial systems and the efficiency of single-equation analysis. Soren Johansen. **52** (1992) 389–402
Weerahandi's exact test • Testing and estimating location vectors when the error covariance matrix is unknown. William Griffiths and George Judge. **54** (1992) 121–138
Weighted SLS estimation • Semiparametric least squares (SLS) and —— of single-index models. Hidehiko Ichimura. **58** (1993) 71–120
Weighting function • Quasi-Aitken estimation for heteroskedasticity of unknown form. John G. Cragg. **54** (1992) 179–201
Weighting schemes • Alternative point-optimal tests for regression coefficient stability. Robert D. Brooks. **57** (1993) 365–376

Zero-consumption probability • Discrete/continuous models of consumer demand with binding nonnegativity constraints. Jeongwen Chiang and Lung-Fei Lee. **54** (1992) 79–93

Author Index

Ahn, Hyungtaik
Distribution theory for the analysis of binary choice under uncertainty with nonparametric estimation of expectations (with Charles F. Manski). **56** (1993) 291–321
Semiparametric estimation of censored selection models with a nonparametric selection mechanism (with James L. Powell). **58** (1993) 3–29
Ali, Mukhtar M.
Robustness to nonnormality of the Durbin-Watson test for autocorrelation (with Subhash C. Sharma). **57** (1993) 117–136
Anderson, T.W.
Tests of overidentification and predetermination in simultaneous equation models (with Naoto Kunitomo). **54** (1992) 49–78
Andrews, Donald W.K.
Estimation of polynomial distributed lags and leads with end point constraints (with Ray C. Fair). **53** (1992) 123–139
Tests of specification for parametric and semiparametric models (with Yoon-Jae Whang). **57** (1993) 277–318
Ansley, Craig F.
Computing p-values for the generalized Durbin-Watson and other invariant test statistics (with Robert Kohn and Thomas S. Shively). **54** (1992) 277–300
Appelbe, Trent W.
A general framework for panel data models with an application to Canadian customer-dialed long distance telephone service (with Cheng Hsiao and Christopher R. Dineen). **59** (1993) 63–86
Arellano, Manuel
On the testing of correlated effects with panel data. **59** (1993) 87–97
Arguea, Nestor M.
Econometric issues of estimating hedonic price functions: With an application to the U.S. market for automobiles (with Cheng Hsiao). **56** (1993) 243–267
Atkinson, Scott E.
Measuring technical efficiency with panel data: A dual approach (with Christopher Cornwell). **59** (1993) 257–261

Baillie, Richard
Prediction in dynamic models with time-dependent conditional variances (with Tim Bollerslev). **52** (1992) 91–113
Baltagi, Badi H.
A monotonic property for iterative GLS in the two-way random effects model (with Qi Li). **53** (1992) 45–51
Monte Carlo evidence on panel data regressions with AR(1) disturbances and an arbitrary variance on the initial observations (with Young-Jae Chan and Qi Li). **52** (1992) 371–380
Monte Carlo results on several new and existing tests for the error component models (with Young-Jae Chang and Qi Li). **54** (1992) 95–120
Erratum. **59** (1993) 405
Bartels, Robert
On the power function of the Durbin-Watson test. **51** (1992) 101–112
Properties of ordinary least squares estimators in regression models with nonspherical disturbances (with Denzil G. Fiebig and Michael McAleer). **54** (1992) 321–334

Beaulieu, J. Joseph
Seasonal unit roots in aggregate U.S. data (with Jeffrey A. Miron). **55** (1993) 305–328
Bell, William R.
The effect of sampling error on the time series behavior of consumption data (with David W. Wilcox). **55** (1993) 235–265
Bierens, Herman J.
Higher-order sample autocorrelations and the unit root hypothesis. **57** (1993) 137–160
Blundell, Richard
Investment and Tobin's Q: Evidence from company panel data (with Stephen Bond, Michael Devereux, and Fabio Schiantarelli). . . . **51** (1992) 233–257
Labour supply and intertemporal substitution (with Costas Meghir and Pedro Neves). **59** (1993) 137–160
Bollerslev, Tim
ARCH modeling in finance: A review of the theory and empirical evidence (with Ray Y. Chou and Kenneth F. Kroner). **52** (1992) 5–59
Prediction in dynamic models with time-dependent conditional variances (with Richard T. Baillie). **52** (1992) 91–113
Bond, Stephen
Investment and Tobin's Q: Evidence from company panel data (with Richard Blundell, Michael Devereux, and Fabio Schiantarelli). . **51** (1992) 233–257
Borsch-Supan, Axel
Smooth unbiased multivariate probability simulators for maximum likelihood estimation of limited dependent variable models (with Vassilis A. Hajivassiliou). **58** (1993) 347–368
Bougerol, Philippe
Stationarity of GARCH processes and of some nonnegative time series (with Nico Picard). **52** (1992) 115–127
Braun, Phillip A.
Misspecifications in vector autoregressions and their effects on impulse responses and variance decompositions (with Stefan Mittnik). **59** (1993) 319–341
Brooks, Robert D.
Alternative point-optimal tests for regression coefficient stability. . **57** (1993) 365–376

Canova, Fabio
Forecasting time series with common seasonal patterns. **55** (1993) 173–200
Cao-Abad, R.
Nonparametric bootstrap confidence intervals for discrete regression functions (with M.C. Rodriguez-Campos). **58** (1993) 207–222
Carraro, Carlo
Editors' introduction. The econometrics of panels and pseudo panels (with Franco Peracchi and Guglielmo Weber). **59** (1993) 1–4
The econometrics of panels and pseudo panels. Edited with Franco Peracchi and Guglielmo Weber. **59** (1993) 1–211
Carroll, R.J.
Semiparametric quasilikelihood and variance function estimation in measurement error models (with J.H. Sepanski). **58** (1993) 223–256
Caudill, Steven B.
More on grouping coarseness in linear normal regression models. . **52** (1992) 407–417
Chambers, Marcus J.
A nonnested approach to testing continuous time models against discrete alternatives. **57** (1993) 319–343
Chan, Young-Jae
Monte Carlo evidence on panel data regressions with AR(1) disturbances and an arbitrary variance on the initial observations (with Badi H. Baltagi and Qi Li). **52** (1992) 371–380

Monte Carlo results on several new and existing tests for the error component models (with Badi H. Baltagi and Qi Li). **54** (1992) 95–120
Erratum. **59** (1993) 405
Chiang, Jeongwen
Discrete/continuous models of consumer demand with binding non-negativity constraints (with Lung-Fei Lee). **54** (1992) 79–93
Chib, Siddhartha
Bayes inference in the Tobit censored regression model. **51** (1992) 79–99
Bayes regression with autoregressive errors: A Gibbs sampling approach. **58** (1993) 275–294
Choi, In
Asymptotic and finite sample distribution theory for IV estimators and tests in partially identified structural equations (with Peter C.B. Phillips). **51** (1992) 113–150
Spurious regressions and residual-based tests for cointegration when regressors are cointegrated. **60** (1994) 313–320
Testing for a unit root by frequency domain regression (with Peter C.B. Phillips). **59** (1993) 263–286
Chou, Ray Y.
ARCH modeling in finance: A review of the theory and empirical evidence (with Tim Bollerslev and Kenneth F. Kroner). **52** (1992) 5–59
Measuring risk aversion from excess returns on a stock index (with Robert F. Engle and Alex Kane). **52** (1992) 201–224
Chow, K. Victor
A simple multiple variance ratio test (with Karen C. Denning). . . . **58** (1993) 385–401
Cornwell, Christopher
Measuring technical efficiency with panel data: A dual approach (with Scott E. Atkinson). **59** (1993) 257–261
Simultaneous equations and panel data (with Peter Schmidt and Donald Wyhowski). **51** (1992) 151–181
Cragg, John G.
Quasi-Aitken estimation for heteroskedasticity of unknown form. . **54** (1992) 179–201

Dagum, Estela Bee
Dynamic linear models for time series components (with Benoit Quenneville). **55** (1993) 333–351
Davidson, Russell
Regression-based methods for using control variables in Monte Carlo experiments (with James G. MacKinnon). **54** (1992) 203–222
Day, Theodore E.
Stock market volatility and the information content of stock index options (with Craig M. Lewis). **52** (1992) 267–287
DeJong, David N.
Co-integration and trend-stationarity in macroeconomic time series: Evidence from the likelihood function. **52** (1992) 347–370
The power problems of unit root tests in time series with autoregressive errors (with John C. Nankervis, N.E. Savin, and Charles H. Whiteman). **53** (1992) 323–343
Denning, Karen C.
A simple multiple variance ratio test (with K. Victor Chow). **58** (1993) 385–401
Devereux, Michael
Investment and Tobin's Q: Evidence from company panel data (with Richard Blundell, Stephen Bond, and Fabio Schiantarelli). . . . **51** (1992) 233–257
Dezhbakhsh, Hashem
Testing for autocorrelation in the presence of lagged dependent variables: A specification error approach (with Jerry G. Thursby). . **60** (1994) 251–272

Dickey, David A.
Discussion: Seasonal unit roots in aggregate U.S. data. **55** (1993) 329–331
Diebold, Francis X.
Discussion: The effect of seasonal adjustment filters on tests for a unit root. **55** (1993) 99–103
Dineen, Christopher R.
A general framework for panel data models with an application to Canadian customer-dialed long distance telephone service (with Cheng Hsiao and Trent W. Appelbe). **59** (1993) 63–86
Dorfman, Jeffrey H.
A Bayesian approach to state space multivariate time series modeling (with Arthur M. Havenner). **52** (1992) 315–346
Dubin, Jeffrey A.
Experimental estimates of the impact of wage subsidies (with Douglas Rivers). **56** (1993) 219–242
Dufour, Jean-Marie
Discussion: The importance of seasonality in inventory models. ... **55** (1993) 129–133
Durlauf, Steven N.
Time series properties of aggregate output fluctuations. **56** (1993) 39–56

Engle, Robert F.
A multi-dynamic-factor model for stock returns (with Victor Ng and Michael Rothschild). **52** (1992) 245–266
ARCH models in finance (edited with Michael Rothschild). **52** (1992) 1–311
Editors' introduction: Statistical models for financial volatility. ARCH models in finance (with Michael Rothschild). **52** (1992) 1–4
Implied ARCH models from options prices (with Chowdhury Mustafa). **52** (1992) 289–311
Measuring risk aversion from excess returns on a stock index (with Ray Chou and Alex Kane). **52** (1992) 201–224
Seasonal cointegration: The Japanese consumption function (with C.W.J. Granger, S. Hylleberg, and H.S. Lee). **55** (1993) 275–298
Testing superexogeneity and invariance in regression models (with David F. Hendry). **56** (1993) 119–139
Evans, Merran
Robustness of size of tests of autocorrelation and heteroscedasticity to nonnormality. **51** (1992) 7–24

Fair, Ray C.
Estimation of polynomial distributed lags and leads with end point constraints (with Donald W.K. Andrews). **53** (1992) 123–139
Ferrier, Gary D.
Global optimization of statistical functions with simulated annealing (with William L. Goffe and John Rogers). **60** (1994) 65–99
Fiebig, Denzil G.
Properties of ordinary least squares estimators in regression models with nonspherical disturbances (with Michael McAleer and Robert Bartels). **54** (1992) 321–334
Findley, David F.
Discussion: Dynamic linear models for time series components. ... **55** (1993) 353–356
Friedman, Benjamin M.
Heteroskedastic cointegration. **54** (1992) 139–158

Geweke, John
Discussion: Forecasting time series with common seasonal patterns. **55** (1993) 201–202

Ghysels, Eric
Editor's introduction. Seasonality and econometric models. **55** (1993) 1–8
Seasonality and econometric models. Editor. **55** (1993) 1–356
The effect of seasonal adjustment filters on tests for a unit root (with Pierre Perron). **55** (1993) 57–98
Giles, Judith
Estimation of the error variance after a preliminary-test of homogeneity in a regression model with spherically symmetric disturbances. **53** (1992) 345–361
Testing linear restrictions on coefficients in a linear regression model with proxy variables and spherically symmetric disturbances (with Kazuhiro Ohtani). **57** (1993) 393–406
Goffe, William L.
Global optimization of statistical functions with simulated annealing (with Gary D. Ferrier and John Rogers). **60** (1994) 65–99
Gong, Byeong-Ho
Finite sample evidence on the performance of stochastic frontiers and data envelopment analysis using panel data (with Robin C. Sickles). **51** (1992) 259–284
Gonzalo, Jesus
Five alternative methods of estimating long-run equilibrium relationships. **60** (1994) 203–233
Gourieroux, Christian
Qualitative threshold ARCH models (with Alain Monfort). **52** (1992) 159–199
Simulation-based inference: A survey with special reference to panel data models (with Alain Monfort). **59** (1993) 5–33
Granger, Clive W.J.
Fellow's opinion: Evaluating economic theory. **51** (1992) 3–5
Seasonal cointegration: The Japanese consumption function (with R.F. Engle, S. Hylleberg, and H.S. Lee). **55** (1993) 275–298
Some generalizations on the algebra of I(1) processes (with Luigi Ermini). **58** (1993) 369–384
Testing for neglected nonlinearity in time series models: A comparison of neural network methods and alternative tests (with Tae-Hwy Lee and Halbert White). **56** (1993) 269–290
Gregory, Allan W.
Discussion: The effect of sampling error on the time series behavior of consumption data (with Tony Wirjanto). **55** (1993) 267–273
Griffiths, William
Testing and estimating location vectors when the error covariance matrix is unknown (with George Judge). **54** (1992) 121–138
Gritz, R. Mark
The impact of training on the frequency and duration of employment. **57** (1993) 21–51
Guilkey, David K.
Estimation and testing in the random effects probit model (with James L. Murphy). **59** (1993) 301–317
Gurmu, Shiferaw
Overdispersion tests for truncated Poisson regression models (with Pravin K. Trivedi). **54** (1992) 347–370

Hajivassiliou, Vassilis A.
Smooth unbiased multivariate probability simulators for maximum likelihood estimation of limited dependent variable models (with Axel Borsch-Supan). **58** (1993) 347–368
Hall, Alastair
Discussion: Induced seasonality and production-smoothing models of inventory behavior. **55** (1993) 169–172

Testing for a unit root in time series using instrumental variable estimators with pretest data based model selection. **54** (1992) 223–250
Erratum. **60** (1994) 321
Hansen, Bruce E.
Another look at the evidence on money-income causality (with Kenneth N. Kuttner). **57** (1993) 189–203
Efficient estimation and testing of cointegrating vectors in the presence of deterministic trends. **53** (1992) 87–121
Hansen, Lars Peter
Seasonality and approximation errors in rational expectations models (with Thomas J. Sargent). **55** (1993) 21–55
Hardle, Wolfgang
Editors' introduction. Nonparametric and semiparametric approaches to discrete response analysis (with Charles F. Manski). **58** (1993) 1–2
How sensitive are average derivatives? (with A.B. Tsybakov). **58** (1993) 31–48
Nonparametric and semiparametric approaches to discrete response analysis. Edited with Charles F. Manski. **58** (1993) 1–274
Harvey, Andrew
Unobserved component time series models with ARCH disturbances (with Esther Ruiz and Enrique Sentana). **52** (1992) 129–157
Hauver, James H.
Morrison's measure of capacity utilization: A critique (with Jet Yee). **52** (1992) 403–406
Havenner, Arthur M.
A Bayesian approach to state space multivariate time series modeling (with Jeffrey H. Dorfman). **52** (1992) 315–346
Hendry, David F.
Testing superexogeneity and invariance in regression models (with Robert F. Engle). **56** (1993) 119–139
Hodoshima, Jiro
Finite-sample properties of single-equation estimators under structural change. **53** (1992) 189–209
Holm, Juhani
Maximum entropy Lorenz curves. **59** (1993) 377–389
Honore, Bo E.
Orthogonality conditions for Tobit models with fixed effects and lagged dependent variables. **59** (1993) 35–61
Horowitz, Joel L.
Semiparametric estimation of a work-trip mode choice model. ... **58** (1993) 49–70
Hsiao, Cheng
A general framework for panel data models with an application to Canadian customer-dialed long distance telephone service (with Trent W. Appelbe and Christopher R. Dineen). **59** (1993) 63–86
Editors' introduction. Studies in econometrics in honor of Dennis J. Aigner (with Paul Ruud). **56** (1993) 1–3
Econometric issues of estimating hedonic price functions: With an application to the U.S. market for automobiles (with Nestor M. Arguea). **56** (1993) 243–267
Studies in econometrics in honor of Dennis J. Aigner (edited with Paul Ruud). **56** (1993) 1–267
Hussey, Robert
Nonparametric evidence on asymmetry in business cycles using aggregate employment time series. **51** (1992) 217–231
Hwang, J.T. Gene
Confidence sets centered at James-Stein estimators: A surprise concerning the unknown-variance case (with Aman Ullah). **60** (1994) 145–156

Hylleberg, S.
Seasonal cointegration: The Japanese consumption function (with R.F. Engle, C.W.J. Granger, and H.S. Lee). **55** (1993) 275–298

Ichimura, Hidehiko
Seasonality and approximation errors in rational expectations models (with Lars Peter Hansen). **55** (1993) 21–55
Semiparametric least squares (SLS) and weighted SLS estimation of single-index models. **58** (1993) 71–120
Inder, Brett
Estimating long-run relationships in economics: A comparison of different approaches. **57** (1993) 53–68
Iwata, Shigeru
A note on multiple roots of the Tobit log likelihood. **56** (1993) 441–446
Highest predictive density estimator in regression models. **53** (1992) 271–295
Instrumental variables estimation in errors-in-variables models when instruments are correlated with errors. **53** (1992) 297–322

Jaggia, Sanjiv
Joint and separate score tests for state dependence and unobserved heterogeneity (with Pravin K. Trivedi). **60** (1994) 273–291
Johansen, Soren
Cointegration in partial systems and the efficiency of single-equation analysis. **52** (1992) 389–402
Testing structural hypotheses in a multivariate cointegration analysis of the PPP and the UIP for UK (with Katarina Juselius). **53** (1992) 211–244
Judge, George
Testing and estimating location vectors when the error covariance matrix is unknown (with William Griffiths). **54** (1992) 121–138
Juselius, Katarina
Testing structural hypotheses in a multivariate cointegration analysis of the PPP and the UIP for UK (with Soren Johansen). **53** (1992) 211–244

Kane, Alex
Measuring risk aversion from excess returns on a stock index (with Ray Chou and Robert F. Engle). **52** (1992) 201–224
Kapteyn, Arie
Coherency and regularity of demand systems with equality and inequality constraints (with Arthur van Soest and Peter Kooreman). **57** (1993) 161–188
Kemp, Gordon C.R.
The potential for efficiency gains in estimation from the use of additional moment restrictions. **53** (1992) 387–399
Kim, Chang-Jin
Dynamic linear models with Markov-switching. **60** (1994) 1–22
Kim, Kiwhan
Unit root tests with conditional heteroskedasticity (with Peter Schmidt). **59** (1993) 287–300
King, Maxwell L.
Nonnested testing for autocorrelation in the linear regression model (with Paramsothy Silvapulle). **58** (1993) 295–314
Klein, Roger W.
Specification tests for binary choice models based on index quantiles. **59** (1993) 343–375

Kohn, Robert
Computing p-values for the generalized Durbin-Watson and other invariant test statistics (with Craig F. Ansley and Thomas S. Shively). **54** (1992) 277–300
Koop, Gary
Bayesian analysis of logit models using natural conjugate priors (with Dale J. Poirier). **56** (1993) 323–340
Kooreman, Peter
Coherency and regularity of demand systems with equality and inequality constraints (with Arthur van Soest and Arie Kapteyn) . . **57** (1993) 161–188
Krane, Spencer D.
Induced seasonality and production-smoothing models of inventory behavior. **55** (1993) 135–168
Some generalizations on the algebra of I(1) processes (with Clive W.J. Granger). **58** (1993) 369–384
Kroner, Kenneth F.
ARCH modeling in finance: A review of the theory and empirical evidence (with Tim Bollerslev and Ray Y. Chou). **52** (1992) 5–59
Kunitomo, Naoto
Tests of overidentification and predetermination in simultaneous equation models (with T.W. Anderson). **54** (1992) 49–78
Kurosawa, Masaka
A method for the analysis of the timing and magnitude of events in a continuous-time panel: The effects of British incomes policy, 1950-73 (with Stephen Pudney). **59** (1993) 161–185
Kuttner, Kenneth N.
Another look at the evidence on money-income causality (with Benjamin M. Friedman). **57** (1993) 189–203
Kwiatkowski, Denis
Testing the null hypothesis of stationarity against the alternative of a unit root: How sure are we that economic time series have a unit root? (with Peter C.B. Phillips, Peter Schmidt, and Yongcheol Shin). **54** (1992) 159–178

Laitila, Thomas
A pseudo-R-squared measure for limited and qualitative dependent variable models. **56** (1993) 341–356
Lee, Hahn Shik
Maximum likelihood inference on cointegration and seasonal cointegration. **54** (1992) 1–47
Seasonal cointegration: The Japanese consumption function (with R.F. Engle, C.W.J. Granger, and S. Hylleberg). **55** (1993) 275–298
Lee, K.C.
Persistence, cointegration, and aggregation: A disaggregated analysis of output fluctuations in the U.S. economy (with M.H. Pesaran and R.G. Pierse). **56** (1993) 57–88
Lee, Lung-Fei
Discrete/continuous models of consumer demand with binding nonnegativity constraints (with Jeongwen Chiang). **54** (1992) 79–93
Lee, Myoung-jae
Median regression for ordered discrete response. **51** (1992) 59–77
Quadratic mode regression. **57** (1993) 1–19
Lee, Tae-Hwy
Testing for neglected nonlinearity in time series models: A comparison of neural network methods and alternative tests (with Halbert White and Clive W.J. Granger). **56** (1993) 269–290

Lewis, Craig M.
Stock market volatility and the information content of stock index options (with Theodore E. Day). **52** (1992) 267–287
Li, Qi
A monotonic property for iterative GLS in the two-way random effects model (with Badi H. Baltagi). **53** (1992) 45–51
Monte Carlo evidence on panel data regressions with AR(1) disturbances and an arbitrary variance on the initial observations (with Badi H. Baltagi and Young-Jae Chan). **52** (1992) 371–380
Monte Carlo results on several new and existing tests for the error component models (with Badi H. Baltagi and Young-Jae Chang). **54** (1992) 95–120
Erratum. **59** (1993) 405
Lillard, Lee A.
Simultaneous equations for hazards: Marriage duration and fertility timing. **56** (1993) 189–217

Maasoumi, Esfandiar
Fellow's opinion: Rules of thumb and pseudo-science. **53** (1992) 1–4
MacKinnon, James G.
Regression-based methods for using control variables in Monte Carlo experiments (with Russell Davidson). **54** (1992) 203–222
Mandy, David M.
Seemingly unrelated regressions under additive heteroscedasticity: Theory and share equation applications (with Carlos Martins-Filho). **58** (1993) 315–346
Manski, Charles F.
Editors' introduction. Nonparametric and semiparametric approaches to discrete response analysis (with Wolfgang Hardle). **58** (1993) 1–2
Distribution theory for the analysis of binary choice under uncertainty with nonparametric estimation of expectations (with Hyungtaik Ahn). **56** (1993) 291–321
Dynamic choice in social settings: Learning from the experiences of others. **58** (1993) 121–136
Nonparametric and semiparametric approaches to discrete response analysis. Edited with Wolfgang Hardle. **58** (1993) 1–274
Maravall, Agustin
Stochastic linear trends: Models and estimators. **56** (1993) 5–37
Martins-Filho, Carlos
Seemingly unrelated regressions under additive heteroscedasticity: Theory and share equation applications (with David M. Mandy). . **58** (1993) 315–346
Matzkin, Rosa L.
Nonparametric identification and estimation of polychotomous choice models. **58** (1993) 137–168
McAleer, Michael
Properties of ordinary least squares estimators in regression models with nonspherical disturbances (with Denzil G. Fiebig and Robert Bartels). **54** (1992) 321–334
McCall, Brian P.
Specification diagnostics for duration models: A martingale approach. **60** (1994) 293–312
McCurdy, Thomas H.
A comparison of risk-premium forecasts implied by parametric versus nonparametric conditional mean estimators (with Thanasis Stengos). **52** (1992) 225–244
McManus, Douglas A.
How common is identification in parametric models? **53** (1992) 5–23

Meghir, Costas
Frequency of purchase and the estimation of demand systems (with Jean-Marc Robin). **53** (1992) 53–85
Labour supply and intertemporal substitution (with Richard Blundell and Pedro Neves). **59** (1993) 137–160
Mehr, Peter
Exogeneity tests in a truncated structural equation (with Hiroki Tsurumi). **56** (1993) 371–396
Mensah, Yaw M.
A simplification of the Kopp-Diewert method of decomposing cost efficiency and some implications. **60** (1994) 133–144
Mills, Jeffrey A.
Bayesian prediction tests for structural stability. **52** (1992) 381–388
Min, Chung-ki
Bayesian and non-Bayesian methods for combining models and forecasts with applications to forecasting international growth rates (with Arnold Zellner). **56** (1993) 89–118
Miron, Jeffrey A.
Seasonal unit roots in aggregate U.S. data (with J. Joseph Beaulieu). **55** (1993) 305–328
Mittnik, Stefan
Misspecifications in vector autoregressions and their effects on impulse responses and variance decompositions (with Phillip A. Braun). **59** (1993) 319–341
Moffitt, Robert
Identification and estimation of dynamic models with a time series of repeated cross sections. **59** (1993) 99–123
Monfort, Alain
Qualitative threshold ARCH models (with Christian Gourieroux). . **52** (1992) 159–199
Simulation-based inference: A survey with special reference to panel data models (with Christian Gourieroux). **59** (1993) 5–33
Montenegro, Alvaro
Identification and estimation of noninvertible non-Gaussian MA(q) processes (with James B. Ramsey). **54** (1992) 301–320
Morimune, Kimio
Modified three-stage least squares estimator which is third-order efficient (with Shinichi Sakata). **57** (1993) 257–276
Murphy, James L.
Estimation and testing in the random effects probit model (with David K. Guilkey). **59** (1993) 301–317
Mustafa, Chowdhury
Implied ARCH models from options prices (with Robert F. Engle). **52** (1992) 289–311

Nankervis, John C.
The power problems of unit root tests in time series with autoregressive errors (with David N. DeJong, N.E. Savin, and Charles H. Whiteman). **53** (1992) 323–343
Nelson, Daniel B.
Filtering and forecasting with misspecified ARCH models I: Getting the right variance with the wrong model. **52** (1992) 61–90
Nerlove, Marc
The importance of seasonality in inventory models: Evidence from business survey data (with David Ross and Douglas Willson). . **55** (1993) 105–128
Neves, Pedro
Labour supply and intertemporal substitution (with Richard Blundell and Costas Meghir). **59** (1993) 137–160
Newey, Whitney K.
Efficiency bounds for some semiparametric selection models (with James L. Powell). **58** (1993) 169–184

Ng, Victor
A multi-dynamic-factor model for stock returns (with Robert F. Engle and Michael Rothschild). **52** (1992) 245–266
Nijman, Theo
Minimum MSE estimation of a regression model with fixed effects from a series of cross-sections (with Marno Verbeek). **59** (1993) 125–136
The optimal choice of controls and pre-experimental observations (with Marno Verbeek). **51** (1992) 183–189
Nowak, Eugen
The identification of multivariate linear dynamic errors-in-variables models. **59** (1993) 213–227

Ohtani, Kazuhiro
Testing linear restrictions on coefficients in a linear regression model with proxy variables and spherically symmetric disturbances (with Judith Giles). **57** (1993) 393–406
Osborn, Denise R.
Discussion: Seasonal cointegration. **55** (1993) 299–303
Osiewalski, Jacek
Bayesian marginal equivalence of elliptical regression models (with Mark F.J. Steel). **59** (1993) 391–403
Robust Bayesian inference in elliptical regression models (with Mark F.J. Steel). **57** (1993) 345–363

Paarsch, Harry J.
Deciding between the common and private value paradigms in empirical models of auctions. **51** (1992) 191–215
Peracchi, Franco
Editors' introduction. The econometrics of panels and pseudo panels (with Carlo Carraro and Guglielmo Weber). **59** (1993) 1–4
The econometrics of panels and pseudo panels. Edited with Carlo Carraro and Guglielmo Weber. **59** (1993) 1–211
Perron, Pierre
The effect of seasonal adjustment filters on tests for a unit root (with Eric Ghysels). **55** (1993) 57–98
Pesaran, Bahram
A simulation approach to the problem of computing Cox's statistic for testing nonnested models (with M. Hashem Pesaran). **57** (1993) 377–392
Pesaran, M. Hashem
A simulation approach to the problem of computing Cox's statistic for testing nonnested models (with Bahram Pesaran). **57** (1993) 377–392
Estimating limited-dependent rational expectations models with an application to exchange rate determination in a target zone (with Hossein Samiei). **53** (1992) 141–163
Persistence, cointegration, and aggregation: A disaggregated analysis of output fluctuations in the U.S. economy (with R.G. Pierse and K.C. Lee). **56** (1993) 57–88
Phillips, Peter C.B.
Asymptotic and finite sample distribution theory for IV estimators and tests in partially identified structural equations (with In Choi). . **51** (1992) 113–150
Testing for a unit root by frequency domain regression (with In Choi). **59** (1993) 263–286
Testing the null hypothesis of stationarity against the alternative of a unit root: How sure are we that economic time series have a unit root? (with Denis Kwiatkowski, Peter Schmidt, and Yongcheol Shin). **54** (1992) 159–178

The spurious effect of unit roots on vector autoregressions: An analytical study (with Hiro Y. Toda). **59** (1993) 229–255

Picard, Nico
Stationarity of GARCH processes and of some nonnegative time series (with Philippe Bougerol). **52** (1992) 115–127

Pierse, R.G.
Persistence, cointegration, and aggregation: A disaggregated analysis of output fluctuations in the U.S. economy (with M.H. Pesaran and K.C. Lee). **56** (1993) 57–88

Pinkse, C.A.P.
On the computation of semiparametric estimates in limited dependent variable models. **58** (1993) 185–205

Poirier, Dale
Bayesian analysis of logit models using natural conjugate priors (with Gary Koop). **56** (1993) 323–340

Potscher, Benedikt M.
Generic uniform convergence and equicontinuity concepts for random fun ctions: An exploration of the basic structure (with Ingmar R. Prucha). **60** (1994) 23–63

Powell, James L.
Efficiency bounds for some semiparametric selection models (with Whitney K. Newey). **58** (1993) 169–184
Semiparametric estimation of censored selection models with a nonparametric selection mechanism (with Hyungtaik Ahn). **58** (1993) 3–29

Prucha, Ingmar R.
Generic uniform convergence and equicontinuity concepts for random fun ctions: An exploration of the basic structure (with Benedikt M. Potscher). **60** (1994) 23–63

Pudney, Stephen
A method for the analysis of the timing and magnitude of events in a continuous-time panel: The effects of British incomes policy, 1950-73 (with Masako Kurosawa). **59** (1993) 161–185

Quienneville, Benoir
Dynamic linear models for time series components (with Estela Bee Dagum). **55** (1993) 333–351

Ramsey, James B.
Identification and estimation of noninvertible non-Gaussian MA(q) processes (with Alvaro Montenegro). **54** (1992) 301–320

Rao, D.S. Prasada
An econometric approach to the construction of generalized Theil-Tornqvist indices for multilateral comparisons (with E.A. Selvanathan). **54** (1992) 335–346

Raynauld, Jacques
Seasonal BVAR models: A search along some time domain priors (with Jean-Guy Simonato). **55** (1993) 203–229

Rilstone, Paul
Calculating the (local) semiparametric efficiency bounds for the generated regressors problem. **56** (1993) 357–370

Rivers, Douglas
Experimental estimates of the impact of wage subsidies (with Jeffrey A. Dubin). **56** (1993) 219–242

Robin, Jean-Marc
Frequency of purchase and the estimation of demand systems (with Costas Meghir). **53** (1992) 53–85

Rodriguez-Campos, M.C.
Nonparametric bootstrap confidence intervals for discrete regression functions (with R. Cao-Abad). **58** (1993) 207–222
Rogers, John
Global optimization of statistical functions with simulated annealing (with William L. Goffe and Gary D. Ferrier). **60** (1994) 65–99
Ross, David
The importance of seasonality in inventory models: Evidence from business survey data (with Marc Nerlove and Douglas Willson). **55** (1993) 105–128
Rothschild, Michael
A multi-dynamic-factor model for stock returns (with Victor Ng and Robert F. Engle). **52** (1992) 245–266
ARCH models in finance (edited with Robert F. Engle). **52** (1992) 1–311
Editors' introduction: Statistical models for financial volatility. ARCH models in finance (with Robert F. Engle). **52** (1992) 1–4
Ruiz, Esther
Unobserved component time series models with ARCH disturbances (with Andrew Harvey and Enrique Sentana). **52** (1992) 129–157
Ruud, Paul
Editors' introduction. Studies in econometrics in honor of Dennis J. Aigner (with Cheng Hsiao). **56** (1993) 1–3
Studies in econometrics in honor of Dennis J. Aigner (edited with Cheng Hsiao). **56** (1993) 1–267
Ryu, Hang K.
Maximum entropy estimation of density and regression functions. . **56** (1993) 397–440
Ryu, Keunkwan
Structural duration analysis of management data. **57** (1993) 91–115

Sakata, Shinichi
Modified three-stage least squares estimator which is third-order efficient (with Kimio Morimune). **57** (1993) 257–276
Salemi, Michael K.
Saddlepath solutions for multivariate linear rational expectations models (with Jaeyeong Song). **53** (1992) 245–269
Samiei, Hossein
Estimating limited-dependent rational expectations models with an application to exchange rate determination in a target zone (with M. Hashem Pesaran). **53** (1992) 141–163
Savin, N.E.
The power problems of unit root tests in time series with autoregressive errors (with David N. DeJong, John C. Nankervis, and Charles H. Whiteman). **53** (1992) 323–343
Schiantarelli, Fabio
Investment and Tobin's Q: Evidence from company panel data (with Richard Blundell, Stephen Bond, and Michael Devereux). **51** (1992) 233–257
Schmertmann, Carl P.
Selectivity bias correction methods in polychotomous sample selection models. **60** (1994) 101–132
Schmidt, Peter
Simultaneous equations and panel data (with Christopher Cornwell and Donald Wyhowski). **51** (1992) 151–181
Testing the null hypothesis of stationarity against the alternative of a unit root: How sure are we that economic time series have a unit root? (with Denis Kwiatkowski, Peter C.B. Phillips, and Yongcheol Shin). **54** (1992) 159–178
Unit root tests with conditional heteroskedasticity (with Kiwhan Kim). **59** (1993) 287–300

Selvanathan, E.A.
An econometric approach to the construction of generalized Theil-Tornqvist indices for multilateral comparisons (with D.S. Prasada Rao). **54** (1992) 335–346
Sentana, Enrique
Unobserved component time series models with ARCH disturbances (with Andrew Harvey and Esther Ruiz). **52** (1992) 129–157
Sepanski, J.H.
Semiparametric quasilikelihood and variance function estimation in measurement error models (with R.J. Carroll). **58** (1993) 223–256
Sharma, Subhash C.
Robustness to nonnormality of the Durbin-Watson test for autocorrelation (with Mukhtar M. Ali). **57** (1993) 117–136
Shephard, Neil
Local scale models: State space alternative to integrated GARCH processes. **60** (1994) 181–202
Shin, Youngcheol
Testing the null hypothesis of stationarity against the alternative of a unit root: How sure are we that economic time series have a unit root? (with Denis Kwiatkowski, Peter C.B. Phillips, and Peter Schmidt). **54** (1992) 159–178
Shively, Thomas S.
Computing p-values for the generalized Durbin-Watson and other invariant test statistics (with Craig F. Ansley and Robert Kohn). **54** (1992) 277–300
Testing for autoregressive disturbances in a time series regression with missing observations. **57** (1993) 233–255
Sickles, Robin C.
Finite sample evidence on the performance of stochastic frontiers and data envelopment analysis using panel data (with Byeong-Ho Gong). **51** (1992) 259–284
Silvapulle, Paramsothy
Nonnested testing for autocorrelation in the linear regression model (with Maxwell L. King). **58** (1993) 295–314
Simonato, Jean-Guy
Seasonal BVAR models: A search along some time domain priors (with Jacques Raynauld). **55** (1993) 203–229
Sims, Christopher A.
Rational expectations modeling with seasonally adjusted data. . . . **55** (1993) 9–19
Smith, Murray D.
Exact densities for variance estimators of the structural disturbances in simultaneous equations models. **60** (1994) 157–180
Song, Jaeyeong
Saddlepath solutions for multivariate linear rational expectations models (with Michael K. Salemi). **53** (1992) 245–269
Sowell, Fallaw
Maximum likelihood estimation of stationary univariate fractionally integrated time series models. **53** (1992) 165–188
Steel, Mark F.J.
Bayesian marginal equivalence of elliptical regression models (with Jacek Osiewalski). **59** (1993) 391–403
Robust Bayesian inference in elliptical regression models (with Jacek Osiewalski). **57** (1993) 345–363
Steigerwald, Douglas C.
Adaptive estimation in time series regression models. **54** (1992) 251–275
On the finite sample behavior of adaptive estimators. **54** (1992) 371–400
Stengos, Thanasis
A comparison of risk-premium forecasts implied by parametric versus nonparametric conditional mean estimators (with Thomas H. McCurdy). **52** (1992) 225–244

Sueyoshi, Glenn T.
Semiparametric proportional hazards estimation of competing risks models with time-varying covariates. **51** (1992) 25–58
Swofford, James L.
A revealed preference test for weakly separable utility maximization with incomplete adjustment (with Gerald A. Whitney). **60** (1994) 235–249

Thompson, T. Scott
Some efficiency bounds for semiparametric discrete choice models. **58** (1993) 257–274
Thursby, Jerry G.
A comparison of several exact and approximate tests for structural shift under heteroscedasticity. **53** (1992) 363–386
Testing for autocorrelation in the presence of lagged dependent variables: A specification error approach (with Hashem Dezhbakhsh). **60** (1994) 251–272
Toda, Hiro Y.
The spurious effect of unit roots on vector autoregressions: An analytical study (with Peter C.B. Phillips). **59** (1993) 229–255
Torelli, Nicola
Modelling inaccuracies in job-search duration data (with Ugo Trivellato). **59** (1993) 187–211
Trivedi, Pravin K.
Joint and separate score tests for state dependence and unobserved heterogeneity (with Sanjiv Jaggia). **60** (1994) 273–291
Overdispersion tests for truncated Poisson regression models (with Shiferaw Gurmu). **54** (1992) 347–370
Trivellato, Ugo
Modelling inaccuracies in job-search duration data (with Nicola Torelli). **59** (1993) 187–211
Tsurumi, Hiroki
Exogeneity tests in a truncated structural equation (with Peter Mehr). **56** (1993) 371–396
Tsybakov, A.B.
How sensitive are average derivatives? (with Wolfgang Hardle). . . . **58** (1993) 31–48
Tybout, James R.
Confidence sets centered at James-Stein estimators: A surprise concerning the unknown-variance case (with J.T. Gene Hwang). **60** (1994) 145–156
Making noisy data sing: Estimating production technologies in developing countries. **53** (1992) 25–44

van Soest, Arthur
Coherency and regularity of demand systems with equality and inequality constraints (with Peter Kooreman and Arie Kapteyn). **57** (1993) 161–188
Verbeek, Marno
Minimum MSE estimation of a regression model with fixed effects from a series of cross-sections (with Theo Nijman). **59** (1993) 125–136
The optimal choice of controls and pre-experimental observations (with Marno Verbeek). **51** (1992) 183–189
Vijverberg, Wim P.M.
Measuring the unidentified parameter of the extended Roy model of selectivity. **57** (1993) 69–89
Vuong, Quang H.
Minimum chi-square estimation and tests for model selection (with Weiren Wang). **56** (1993) 141–168

Wang, Weiren
Minimum chi-square estimation and tests for model selection (with Quang H. Vuong). **56** (1993) 141–168
Weber, Guglielmo
Editors' introduction. The econometrics of panels and pseudo panels (with Carlo Carraro and Guglielmo Weber). **59** (1993) 1–4
The econometrics of panels and pseudo panels. Edited with Carlo Carraro and Franco Peracchi. **59** (1993) 1–211
Weiss, Andrew A.
Some aspects of measurement error in a censored regression model. **56** (1993) 169–188
Whang, Yoon-Jae
Tests of specification for parametric and semiparametric models (with Donald W.K. Andrews). **57** (1993) 277–318
White, Halbert
Testing for neglected nonlinearity in time series models: A comparison of neural network methods and alternative tests (with Tae-Hwy Lee and Clive W.J. Granger). **56** (1993) 269–290
Whiteman, Charles H.
The power problems of unit root tests in time series with autoregressive errors (with David N. DeJong, John C. Nankervis, and N.E. Savin). **53** (1992) 323–343
Whitney, Gerald A.
A revealed preference test for weakly separable utility maximization with incomplete adjustment (with James L. Swofford). **60** (1994) 235–249
Wilcox, David W.
The effect of sampling error on the time series behavior of consumption data (with William R. Bell). **55** (1993) 235–265
Willson, Douglas
The importance of seasonality in inventory models: Evidence from business survey data (with Marc Nerlove and David Ross). . . . **55** (1993) 105–128
Wirjanto, Tony
Discussion: The effect of sampling error on the time series behavior of consumption data (with Allan W. Gregory). **55** (1993) 267–273
Wyhowski, Donald
Simultaneous equations and panel data (with Christopher Cornwell and Peter Schmidt). **51** (1992) 151–181

Yee, Jet
Morrison's measure of capacity utilization: A critique (with James H. Hauver). **52** (1992) 403–406

Zabel, Jeffrey E.
A comparison of nonnested tests for misspecified models using the method of approximate slopes. **57** (1993) 205–232
Zellner, Arnold
Bayesian and non-Bayesian methods for combining models and forecasts with applications to forecasting international growth rates (with Chung-ki Min). **56** (1993) 89–118
Discussion: Seasonal BVAR models. **55** (1993) 231–234
